OPINIONS AND DECLARATIONS RENDERED BY THE INTERNATIONAL COMMISSION ON ZOOLOGICAL NOMENCLATURE

Edited by
FRANCIS HEMMING, C.M.G., C.B.E.
Secretary to the Commission

OPINION 401
Suppression under the Plenary Powers of the generic name Colymbus Linnaeus, 1758, and addition to the Official List of Generic Names in Zoology of the generic names Gavia Forster, 1788, and Podiceps Latham, 1787 (Class Aves)

INTERNATIONAL COMMISSION ON ZOOLOGICAL NOMENCLATURE

COMPOSITION AT THE TIME OF THE ADOPTION OF THE RULING GIVEN IN OPINION 401

A. The Officers of the Commission

Honorary Life President: Dr. Karl Jordan (British Museum (Natural History), Zoological Museum, Tring, Herts., England)

President: Professor James Chester Bradley (Cornell University, Ithaca, N.Y. U.S.A.) (12th August 1953)
Vice-President: Senhor Dr. Afranio do Amaral (Sao Paulo, Brazil) (12th August 1953)
Secretary: Mr. Francis Hemming (London, England) (27th July 1948)

B. The Members of the Commission

Arranged in order of precedence by reference to date of election or of most recent re-election, as prescribed by the International Congress of Zoology

Professor H. Boschma (Rijksmuseum van Natuurlijke Historie, Leiden, The Netherlands) (1st January 1947)
Senor Dr. Angel Cabrera ( Eva Peron, F.C.N.G.R., Argentina) (27th July 1948)
Mr. Francis Hemming (London, England) (27th July 1948) (Secretary)
Dr. Joseph Pearson (Tasmanian Museum, Hobart, Tasmania, Australia) (27th July 1948)
Dr. Henning Lemche (Universitetets Zoologiske Museum, Copenhagen, Denmark) (27th July 1948)
Professor Teiso Esaki (Kyushu University, Fukuoka, Japan) (17th April 1950)
Professor Pierre Bonnet (Université de Toulouse, France) (9th June 1950)
Mr. Norman Denbigh Riley (British Museum (Natural History) London) (9th June 1950)
Professor Tadeusz Jaczewski (Institute of Zoology, Polish Academy of Sciences, Warsaw, Poland) (15th June 1950)
Professor Erich Martin Hering (Zoologisches Museum der Humboldt-Universität zu Berlin, Germany) (5th July 1950)
Senhor Dr. Afranio do Amaral (S. Paulo, Brazil) (12th August 1953) (Vice-President)
Professor J. R. Dymond (University of Toronto, Toronto, Canada) (12th August 1953)
Professor J. Chester Bradley (Cornell University, Ithaca, N.Y., U.S.A.) (12th August 1953) (President)
Professor Harold E. Vokes (Johns Hopkins University, Baltimore, Maryland, U.S.A.) (12th August 1953)
Professor Béla Hankó (Mezőgazdasági Muzéum, Budapest, Hungary) (12th August 1953)
Dr. Norman R. Stoll (Rockefeller Institute for Medical Research, New York, N.Y., U.S.A.) (12th August 1953)
Mr. P. C. Sylvester-Bradley (Sheffield University, Sheffield, England) (12th August 1953)
Dr. L. B. Holt Huis (Rijksmuseum van Natuurlijke Historie, Leiden, The Netherlands) (12th August 1953)
SUPPRESSION UNDER THE PLENARY POWERS OF THE GENERIC NAME "COLYMBUS" LINNAEUS, 1758, AND ADDITION TO THE "OFFICIAL LIST OF GENERIC NAMES IN ZOOLOGY" OF THE GENERIC NAMES "GAVIA" FORSTER, 1788, AND "PODICEPS" LATHAM, 1787 (CLASS AVES)

RULING:—(1) The following action is hereby taken under the Plenary Powers:—

(a) The generic name Colymbus Linnaeus, 1758, is hereby suppressed for the purposes of the Law of Priority but not for those of the Law of Homonymy.

(b) All uses of the generic name Gavia prior to Gavia Forster, 1788, are hereby suppressed for the purposes both of the Law of Priority and of the Law of Homonymy.

(c) All type selections hitherto made for the under-mentioned nominal genera are hereby set aside and the species specified below are hereby designated to be the type species of the genera concerned:—

(i) Colymbus immer Brünnich, 1764, to be the type species of the genus Gavia Forster, 1788;

(ii) Colymbus cristatus Linnaeus, 1758, to be the type species of the genus Podiceps Latham, 1787.

(2) The under-mentioned generic names are hereby placed on the Official List of Generic Names in Zoology with the Name Nos. 992 and 993 respectively:—

(a) Gavia Forster, 1788, as validated under the Plenary Powers under (1)(b) above (gender: feminine) (type species, by designation under the Plenary Powers under (1)(c)(i) above: Colymbus immer Brünnich, 1764);
(b) *Podiceps* Latham, 1787 (gender: masculine) (type species, by designation under the Plenary Powers under (1)(c)(ii) above: *Colymbus cristatus* Linnaeus, 1758).

(3) The under-mentioned specific names are hereby placed on the *Official List of Specific Names in Zoology* with the Name Nos. 699 and 700 respectively:

(a) *cristatus* Linnaeus, 1758, as published in the combination *Colymbus cristatus* (specific name of type species of *Podiceps* Latham, 1787);

(b) *immer* Brünnich, 1764, as published in the combination *Colymbus immer* (specific name of type species of *Gavia* Forster, 1788).

(4) The under-mentioned generic names are hereby placed on the *Official Index of Rejected and Invalid Generic Names in Zoology* with the Name Nos. severally specified below:

(a) *Colymbus* Linnaeus, 1758, as suppressed under the Plenary Powers under (1)(a) above (Name No. 418);

(b) *Colymbus* Paetel, 1875 (a junior homonym of *Colymbus* Linnaeus, 1758) (Name No. 419);

(c) *Colymbus* Hadding, 1913 (a junior homonym of *Colymbus* Linnaeus, 1758) (Name No. 420);

(d) *Gavia* Brisson, 1760, as suppressed under the Plenary Powers under (1)(b) above (Name No. 421);

(e) *Gavia* Gmelin (S.G.), 1770, as suppressed under the Plenary Powers under (1)(b) above (Name No. 422);

(f) *Gavia*, all other uses of, as a generic name prior to *Gavia* Forster, 1788 (usages suppressed under the Plenary Powers under (1)(b) above) (Name No. 423);
(g) *Gavia* Oken, 1816 (a junior homonym of *Gavia* Forster, 1788) (Name No. 424);

(h) *Gavia* Boie, 1822 (a junior homonym of *Gavia* Forster, 1788) (Name No. 425);

(i) *Gavia* Gloger, 1842 (a junior homonym of *Gavia* Forster, 1788) (Name No. 426).

I.—THE STATEMENT OF THE CASE

Among the documents transferred in 1938 to the custody of Mr. Francis Hemming, following his election as Secretary to the Commission, were a number of papers which showed that in 1926 the late Dr. Witmer Stone (*Academy of Natural Sciences of Philadelphia, Pennsylvania, U.S.A.*) had submitted to the Commission a request for a Ruling as to the species to be accepted as the type species of the genus *Colymbus* Linnaeus, 1758, but that no progress had been made in the consideration of this matter. At the Session held by the Commission in Paris in 1948 Mr. Hemming brought this case before the Commission in a paper numbered I.C.(48)19 in which, after drawing attention to the need for a determined drive to secure a decision on this important but admittedly controversial case, he suggested that as a first step an effort should be made to secure for the Commission an objective survey of the position in this matter under the *Règles*, for even on questions of fact there was at that time no agreement among specialists. The following is an extract of the relevant portion of the paper referred to above (Hemming, 1950, *Bull. zool. Nomencl.* 3 : 137—138):

(7) *Type species of Colymbus Linnaeus, 1750 (Class Aves)*: This case has been on the books of the Commission for over twenty years, and the only reason why it was not settled long ago was that, whatever decision was taken, it was certain that that decision would displease some section of ornithologists. As the result of this cowardly action on the part of the Commission, the situation has become more difficult, rather than less difficult. It is essential, therefore, that a decision should be taken with the least possible delay. Owing to the fact that
there is a wide divergence of practice in this case, one group of workers taking as the type of this genus a species which is the type of one family and another group a species which is the type of another family, nothing would be gained by the use of the Plenary Powers. It seems to me, therefore, that the proper course is to determine definitely what is the type species of this genus under the Règles and to render an Opinion giving the answer. Owing to the divergence of practice referred to above, this is not a matter on which it is possible to obtain any material assistance from ornithologists, for all the specialists concerned are committed in their own work to one view or the other. It is accordingly proposed that, in view of the negative results obtained from the consultations carried out since the Lisbon Session of the Commission, the Secretary to the Commission should be instructed to prepare for the consideration of the Commission an objective statement of this case, together with his conclusion as to the type species of this genus on a strict application of the Règles, that an immediate vote should be taken on this statement when it is available and that, on the completion of the voting, an Opinion setting out the decision of the Commission should be published, the genus Colymbus being at the same time placed on the Official List, with whatever species the Commission may have found to be the type under the Règles. (Z.N.(S.)78.) I recommend also that the Commission should place on record their disapproval of the use of delay as a means of avoiding difficult decisions and their determination in future to provide an answer without fear or favour in regard to every matter submitted to them for decision.

2. Decision on the procedure to be followed in the further handling of the present case taken by the International Commission on Zoological Nomenclature at Paris in 1948: The question of the type species of the genus Colymbus Linnaeus, 1758, was considered by the Commission at the Thirteenth Meeting of its Session held in Paris in 1948. The following is an extract from the Official Record of the Commission’s Proceedings at the foregoing Session setting out the decision then taken as to the procedure to be followed in the further handling of the present case (Paris Session, 13th Meeting, Conclusion 8) (1950, Bull. zool. Nomencl. 4 : 362):—

THE COMMISSION:—

(1) agreed:—

(a) that it was important that a decision on the question of the type species of the genus Colymbus Linnaeus, 1758 (Class Aves), should be taken with the least possible further delay;

(b) that, in order to assist the Commission in taking a decision on the foregoing question, the delay in the
consideration of which had been due less to its intrinsic difficulty than to its controversial character, it was desirable that the Commission should be furnished with a report on the issues involved prepared by a zoologist who was an authority on nomenclature but was not himself an ornithologist and who therefore had not had to prejudge this question in the course of his own work;

(2) in view of (1)(b) above, invited Commissioner Francis Hemming to examine the question of what species was under the Règles the type species of the genus *Colymbus* Linnaeus, 1758 (Class Aves), and to furnish a Report thereon at the earliest possible moment;

(3) agreed to examine the issues involved and to reach a decision thereon immediately upon receipt of the Report referred to in (2) above.

At the same time the Commission placed on record its disapproval of the unnecessary delays which had been allowed to occur in reaching a decision on the present case and placed on record its determination to avoid all delays of this kind in dealing with cases in future (1950, *Bull. zool. Nomencl.* 4: 363).

3. Report submitted by Mr. Francis Hemming in 1950 in response to the request addressed to him by the Commission at Paris in 1948: When Mr. Hemming came to prepare the Report on the present case asked for by the Commission at its Session held in Paris in 1948 (paragraph 2 above), he found that the discussion of certain of the component problems involved could not be completed until the Official Record of the Proceedings of the Commission and the Section on Nomenclature in Paris in 1948 had been officially approved. These Records were settled in January 1950 and on 9th February of that year Mr. Hemming completed the Report asked for. This Report was not immediately submitted to the Commission, for, as explained in the Supplementary Report reproduced in paragraph 5 of the present Opinion an indication received at that time suggested that there was a chance that following the then forthcoming meeting at Uppsala of the Tenth International Ornithological Congress ornithologists might themselves combine to submit to the Commission an application which, if not commanding the unanimous support of all workers, would nevertheless have the backing of a large
and representative group of specialists in different parts of the world. Mr. Hemming’s Report of February 1950 was eventually published in October 1952 after the receipt of the application from the Standing Committee on Ornithological Nomenclature appointed in June 1950 by the International Ornithological Congress (paragraph 4 below), which owed its origin to his discussions which had taken place at the Uppsala Congress (see paragraph 7 below), Mr. Hemming’s Report was as follows:—

REPORT ON THE TYPE SPECIES OF THE NOMINAL GENUS "COLYMBUS" LINNAEUS, 1758, PREPARED BY MR. FRANCIS HEMMING IN RESPONSE TO AN INVITATION BY THE THIRTEENTH INTERNATIONAL CONGRESS OF ZOOLOGY, PARIS, 1948

To:—

The International Commission on Zoological Nomenclature

28 Park Village East,
Regent’s Park,
9th February 1950

In compliance with the request addressed to me as "a zoologist who was an authority on nomenclature but was not himself an ornithologist and who therefore had not had to prejudice the question in the course of his own work" by the Section on Nomenclature of the Thirteenth International Congress of Zoology, Paris, 1948 (1950, Bull. zool. Nomencl. 5: 104—105), a request later confirmed, with other recommendations submitted by the Section on Nomenclature and by the International Commission, by the International Congress in Plenary Session (1950, Bull. zool. Nomencl. 5: 131), I have the honour to submit the following Report on "the question of the nominal species which, under the Règles, is the type species of the genus Colymbus Linnaeus, 1758 (Class Aves)."

2. When the foregoing invitation was extended to me, the urgency of the problem remitted to me for examination was strongly stressed by the International Commission. I accordingly began this investigation as soon as possible after the close of the Paris Congress. In consequence, the first draft of the present Report was completed some time ago. It has not however been possible for me until now to complete and sign this Report, for it was necessary to wait until the Official Record of Proceedings at Paris both of the International Commission and of the Section on Nomenclature of the Congress had been approved in the prescribed manner, since it was essential in the
present Report at certain points to be able to quote from the Official Record passages containing decisions which had a direct bearing upon the problem remitted to me for report. Now, however, that the Official Record in question has been finally approved and is in page proof and I am in consequence in a position to quote the passages in question, I have completed my Report which I now submit for consideration.

3. Arrangement of the present Report: In the present Report I first examined Article 30 of the Règles, the Article which governs the fixing of type species of nominal genera. Having thus established under which of the Rules in Article 30 the type species of the nominal genus Colymbus Linnaeus, 1758, falls to be determined, I examined in turn the claims which at different times have been advanced on behalf of various authors for recognition as the author by whom the type species of this nominal genus was determined. I have not thought it either necessary or desirable to quote from the numerous papers which at different times have been published on this subject, in view especially of the fact that much of the argument adduced in the earlier of these papers is beside the point, those arguments being based upon the assumed existence of a "Law of Elimination," a method for determining the type species of genera which, as is well known, had a considerable vogue prior to the adoption in 1901 of the present Règles, in which, however, such a provision found no place (see paragraph 16 below).

I. QUESTION OF THE RULE IN ARTICLE 30 UNDER WHICH THE TYPE SPECIES OF THE NOMINAL GENUS "COYMBUS" LINNAEUS, 1758, WAS DETERMINED

4. The nature of the provisions in Article 30 relating to the determination of the type species of nominal genera: Article 30, the Article in the Règles which governs the determination of the type species of nominal genera, contains a series of Rules for the foregoing purpose and prescribes that these Rules are to be applied successively. Thus, in order to make a start in determining the type species of any given nominal genus, it is necessary to examine the position of that nominal genus in relation to each Rule in turn, for it is not until it has been established that the type species of such a genus was not determined under any of the preceding Rules that the position of that genus in relation to any of the later Rules has any relevance whatever. Accordingly, in the present part of this Report, I examine the position of the nominal genus Colymbus Linnaeus, 1758, in relation to each successive Rule in Article 30 for the purpose of ascertaining which of those Rules is applicable to that generic name.
5. Rule (a) (type species by original designation) : Rule (a) provides that, where the original author of a generic name himself designates a nominal species as the type species of the nominal genus so named, that action is final. When in 1758 Linnaeus published the Tenth Edition of the Systema Naturae, he did not designate type species for any of the nominal genera which he then established, for at that time the need for nomenclatorial purposes of such a concept as that of a "type species" for a nominal genus had not been recognised. Accordingly, Linnaeus did not in 1758 himself designate a type species for the nominal genus Colymbus Linnaeus. Rule (a) in Article 30 has therefore no bearing on the present case.

6. Rule (b) (type species by indication through the use of the words "typicus" or "typus" as the trivial name of one of the included species) : None of the nominal species referred by Linnaeus to his genus Colymbus bore as its trivial name either the word "typicus" or the word "typus." Rule (b) has therefore no bearing on this case.

7. Rule (c) (type species by monotypy) : Linnaeus placed more than one nominal species in the genus Colymbus. This genus is therefore not monotypical, and Rule (c) has, in consequence, no relevance to this case.

8. Rule (d) (type species by absolute tautonymy) : None of the nominal species referred by Linnaeus to the genus bore as its trivial name the word "colymbus." In its simplest form Rule (d) therefore does not apply to the present case. Nor does this Rule so apply under either of the two extensions made by Opinions 16 and 18 respectively (for the current application of the former of which see 1950, Bull. zool. Nomencl. 4: 154, and for the latter, ibid. 4: 153). For none of the nominal species cited by Linnaeus as belonging to the genus Colymbus either (1) was then cited with a synonym consisting of a pre-1758 univerbal specific name consisting of the word "Colymbus" (Opinion 16) or (2) possesses a synonym having, as its trivial name, the word "colymbus" (Opinion 18).

9. Rule (e) : The application of the term "Rule" to this provision is a misnomer, for it does not provide a test for determining the type species to be applied after Rule (d) and before Rule (f). All that this provision does is to deny eligibility for consideration as candidates for the status of type species to three classes of nominal species, namely (a) nominal species not included in the nominal genus concerned at the time when its name was first published; (b) nominal species which were species inquirendae from the standpoint of the author of the generic name concerned; (c) nominal species which were only doubtfully referred to the genus concerned by the author of the name of that genus. None of the species referred by Linnaeus in 1758 to the genus Colymbus was a species inquirenda from his standpoint, nor was any of those species only doubtfully referred by him to that genus. Accord-
ingly, neither the second nor the third of the provisions contained in the so-called Rule (e) has any bearing on the question of the type species of the genus *Colymbus* Linnaeus, 1758. The first of these provisions (that which excludes from eligibility as type species any species not placed in a given genus by the original author of the generic name concerned), especially as clarified by the International Congress of Zoology in 1948 (as to which see paragraph 22 below), does, as will be seen in later parts of this Report, have an important bearing upon the validity of the arguments that have been advanced by some of those who have taken part in the discussion regarding the species to be accepted as the type species of *Colymbus* Linnaeus, 1758.

10. Rule (f) (type species (i) of a nominal genus established to provide a name for an older nominal genus possessing an invalid name and (ii) of a nominal genus the name of which has been replaced for the foregoing reason): The generic name *Colymbus* Linnaeus, 1758, was not published as a substitute for the name of an older nominal genus, nor has this name ever been replaced on the ground that it was invalid. Thus, Rule (f) has no bearing upon the present case.

11. Rule (g) (type species by subsequent selection): Having now examined in turn each of the Rules in Article 30 lettered (a) to (f) (both inclusive) and found that none of them is applicable to the name *Colymbus* Linnaeus, 1758, we are left only with Rule (g), the last of the mandatory provisions in the foregoing Article. We see therefore that, in order to ascertain what is the type species of the nominal genus *Colymbus* Linnaeus, 1758, it is necessary to ascertain by reference to the literature which of the species included in this genus by Linnaeus in 1758 was first selected to be the type species in a manner which satisfies the requirements of Article 30 of the Règles.

II. EXAMINATION OF THE CLAIMS ADVANCED ON BEHALF OF CERTAIN AUTHORS FOR RECOGNITION AS HAVING, AT SPECIFIED DATES, BEEN THE FIRST AUTHOR VALIDLY TO SELECT A TYPE SPECIES FOR THE NOMINAL GENUS "COLYMBUS" LINNAEUS, 1758

12. In the present Section I examine first the conditions which under Rule (g) in Article 30 must be satisfied in order to qualify the action of any given author to rank as constituting a valid selection of a type species for a nominal genus, the type species of which has not been determined under any of the earlier Rules in the foregoing Article. In the light of the survey so made, I then examine, in turn, the claims which have at different times been advanced for the recognition of
particular authors as having, on specified dates, been the first author validly to select a type species for the nominal genus *Colymbus* Linnaeus, 1758.

(a) Provisions relating to the selection by an author of a type species for a given nominal genus prescribed in Rule (g) in Article 30 of the "Règles" and associated provisions

13. In order both to shorten and to simplify the later consideration of the claims which have been advanced in favour of the recognition of particular authors as having at specified dates been the first author validly to select a type species for the nominal genus *Colymbus* Linnaeus, 1758, I examine in the following paragraphs the conditions which must be satisfied in order to qualify the action of any given author for recognition as constituting a valid type selection under the Règles. This review appears to me essential, not only because in some of the arguments which have been advanced in regard to the type species of the genus *Colymbus* Linnaeus, 1758, those provisions have been mis understood or even disregarded, but also because prior to 1948 some of the provisions concerned contained serious ambiguities which have now been removed as the result of decisions taken by the Thirteenth International Congress of Zoology at its meeting held in Paris in that year. The provisions of which it is necessary to take note are seven in number. Of these provisions the first consists of a qualification directly inserted into Rule (g) in Article 30 at the time (Boston, 1907) when that Article in its present form was inserted in the Règles: the second and third follow from interpretations of Rule (g) given by the Commission in *Opinions* rendered by the International Commission prior to 1939, each of which either in its original, or in some clarified, form was incorporated into the Règles by the International Congress of Zoology in 1948; the fourth, fifth, sixth and seventh of these provisions all relate to matters on which prior to 1948 the meaning of the Règles was in doubt and on which authoritative clarifications were in that year provided by the Thirteenth International Congress of Zoology.

(i) Provisions relating to the selection of the type species of a nominal genus contained in Rule (g) in Article 30 in the form in which that Article existed prior to July 1948

14. The expression "select the type species" : Rule (g) in Article 30, as that Article stood prior to July 1948, provided that, where the type species of a given nominal genus had not been determined under any of the preceding Rules in that Article, its type species should be the first of the originally included species to be so selected by a subsequent author. This provision was accompanied by the following interpretation of the meaning to be attached to the expression "select the type"
(an expression amended to "select the type species" by the Thirteenth International Congress of Zoology—see 1950, Bull. zool. Nomencl. 4: 300): "The meaning of the expression 'select the type' is to be rigidly construed. Mention of a species as an illustration or example does not constitute a selection of a type."

(ii) Provisions relating to the selection of the type species of a nominal genus originally promulgated in "Opinions" rendered by the International Commission on Zoological Nomenclature and in 1948 incorporated into the "Règles" either in their original or in a modified form

15. The Opinions relating to the interpretation of Rule (g) in Article 30 rendered by the International Commission on Zoological Nomenclature prior to the meeting held in Paris in 1948 which have a bearing upon the present case are Opinions 6 and 62. The rulings given in these Opinions are discussed in the two immediately following paragraphs.

16. The so-called "Law of Elimination" not recognised in the "Règles" as a mandatory provision: Prior to the international regulation of zoological nomenclature (through the adoption of the present Règles by the Fifth International Congress of Zoology at Berlin in 1901) zoologists possessed no authoritative guide as to how they should proceed when they desired to split up a previously established genus, save in those cases where the original author of the generic name concerned had himself specified a type species for the genus so named. For, although the concept of a "type species" in relation to genera was generally accepted, there was no agreement as to how to apply that concept in relation to nominal genera established without designated type species, for example, nominal genera, other than monotypical genera, established by Linnaeus and other authors of later date. Authors were forced therefore to make a choice for themselves as to how they should proceed in this matter. The result, as was inevitable, was that there was the greatest diversity of practice: some authors applied rules similar to those later embodied in the present Rule (g) in Article 30, under which the species first selected to be the type species of a given genus was accepted as such; others accepted as the type species the first of any series of species placed in a given nominal genus by its author (the so-called "chef de file" system); others adopted a system under which it was assumed that, whenever an author on taxonomic grounds removed a species from a given previously established nominal genus by placing it in some other nominal genus, the species so removed ceased to be eligible to become the type species of the genus from which it had been removed; in this way, it was argued, the field from which a type species could be selected was gradually narrowed until finally either only one of the original species
was left in the genus and that species automatically became the type species or until some author selected as the type species of the genus one of the originally included species which had not yet been removed from that genus on taxonomic grounds. This method of determining the type species of a genus was known as the "Law of Elimination." Theoretically, this system possessed advantages over any other system, for, if it could have been applied, in a uniform manner, it would have avoided the confusing transfers of generic names from one genus to another which have often resulted from the acceptance as the type species of a genus of the first originally included species to be so selected. Unfortunately, however, insuperable difficulties were often encountered in applying this superficially simple rule owing to differences of opinion among specialists as to what action did or did not constitute the removal of a species from a given genus. The result was that, far from providing the stability which had been hoped for, this so-called "Law" often resulted in the adoption by specialists of totally different views as to the type species of any given genus. This method of determining the type species of a genus had the further weakness that its application was extremely laborious involving the examination of the entire literature of any group before a type-determination could even be attempted and thus placed a premium upon bibliographical investigations as contrasted with zoological investigations. It was for these reasons that, when the present Règles were adopted, the "Law of Elimination" was given no place in the mandatory provisions embodied in Article 30. The only concession then granted to this former unofficial "Law" was the insertion in the non-mandatory "Recommendations" at the end of Article 30 of the advice to specialists when selecting the type species of a genus to bear in mind the importance of promoting stability by not selecting as the type species of genera species which on taxonomic grounds are currently treated as having been removed therefrom. Even this "Recommendation" occupies only the fourth place in the list of "Recommendations" there given. Normally, practices in vogue before the adoption of the Règles which however failed to secure admittance to the Règles are of historical interest only, but in the particular case of the nominal genus Colymbus Linnaeus the application of the so-called "Law of Elimination" bulked so largely in the early days—and, indeed, still forms the basis of the argument advanced by one large and important group of workers—that it seems essential in the present Report to make it perfectly clear that in its original form the "Law of Elimination" finds no place in the Règles. It should be noted at this point that in one extremely limited application official approval has been given to the principle of "elimination" in a mandatory provision enacted since the adoption of the Règles in 1901. This was in 1910, the year in which the Commission's Opinion 6 was published (Smithson. Publ. 1938: 6), for in that Opinion the Commission ruled that, where a nominal genus was established with two nominal species but without a designated type species and later one of those nominal species was made the type species of a newly established monotypical genus, it was
to be deemed for nomenclatorial purposes to have been removed by elimination from the earlier genus, which was thus left with only one species which accordingly became the type species. In the years following the publication of this Opinion it was sometimes argued that the ruling there given need not be regarded as being confined to cases where a species was removed from a genus to a monotypical genus and further that the principle embodied in this Opinion was properly applicable also to cases where more than two species were placed in a genus and later authors removed some of those species, either singly or in groups. This latter argument, if well founded, would have amounted to a full-scale recognition of the Law of Elimination and would greatly have reduced the scope within which Rule (g) in Article 30 would operate and in some cases would have completely superceded that Rule. This matter was considered by the Commission and the Congress at Paris in 1948, and it was then decided to incorporate in the Règles the decision originally given in Opinion 6, clarified, however, in such a way as to make it absolutely clear that it applied only to the limited class of case originally specified in that Opinion (see 1950, Bull. zool. Nomencl., 4: 157).1

17. A nominal species which is the type species of one genus eligible for selection as the type species of another genus : In the preceding paragraph we have considered the position of the so-called “Law of Elimination” in relation to the provisions of the Règles as adopted at Berlin in 1901, and have specially noted the one instance in which, through Opinion 6, mandatory force was given to the principle embodied in that so-called “Law,” which, as explained, had in its main form been rejected by the authors of the present Règles. We have here to note a decision taken by the Commission in Opinion 62 (published in 1914) (Smithson Publ. 2256: 147—149) rejecting an attempt to secure a further partial acceptance of the principle of elimination. Up to that time it had sometimes been argued that, where a nominal genus had been established with a number of included nominal species but without a designated type species, the species which were eligible for selection by a later author acting under Rule (g) in Article 30 were not all the originally included nominal species but only those species which had not in the meantime become the type species of other genera. This argument, which, it will be observed, relates to one of the situations which (as explained in paragraph 16) some authors had sought to argue could be brought within the scope of the decision taken in Opinion 6, was rejected by the Commission which ruled that a species which was the type species of one genus was still eligible for selection as the type species of another genus. This decision was

---

1 Even this limited recognition of the principle underlying the so-called Law of Elimination was deleted from the Règles by the Fourteenth International Congress of Zoology, Copenhagen, 1953 (see 1953, Copenhagen Decisions zool. Nomencl.: 72, Decision 135).
endorsed both by the Commission and the Congress in 1948 and was embodied by the latter in the Règles (see 1950, Bull. zool. Nomencl. 4: 156).

18. At Paris in 1948 the International Commission on Zoological Nomenclature obtained the approval of the Thirteenth International Congress of Zoology for the insertion in the Règles of provisions clarifying the meaning of Rule (g) in Article 30 in four respects. Each of these clarifications has, as will be seen, a bearing on the question of the species to be accepted as the type species of the nominal genus Colymbus Linnaeus, 1758. These clarifications are accordingly described briefly in the following paragraphs.

19. Meaning to be attached to the word “select” as used in the expression “select a type species” as used in Rule (g) in Article 30: Reference has already been made (paragraph 14 above) to the supplementary provision in Rule (g) in Article 30 which makes it clear that that Rule is not satisfied if an author merely cites one of the species originally included in a nominal genus established by some earlier author as being an “illustration” or “example” of that genus and prescribes that the expression “select a type” is to be “rigidly construed.” This provision removed what otherwise would have been a serious ambiguity in that Rule, but it left obscure another matter which, as every worker in systematic zoology has occasion to know, constantly arose, whenever it was necessary to determine whether a type species had been validly selected for a given nominal genus. The problem involved was whether an author was to be deemed to have selected the type species of a given nominal genus when, while stating categorically that a given species was the type species, he made it clear also that he regarded himself, not as selecting that species to be the type species, but as doing no more than place on record that that species was the type species as the result of action taken by an earlier author or by earlier authors. The most frequent situation of this kind arises in the case of papers published before the adoption of the Règles where an author guiding himself by the so-called “Law of Elimination” (see paragraph 16 above) came to the conclusion that, as the result of the removal of species to other genera, only one species remained eligible for the position of type species of the genus under examination and therefore that species had automatically become the type species “by elimination.” The same problem arises also where an author states that a given species is the type species of a genus because it had been so selected by a previous author, when on further
examination it is found that no such earlier selection had been made. In view of the very large number of currently accepted type selections which rest upon statements made in papers published before 1901 by authors working under the "Law of Elimination," it was obvious that any ruling which deprived statements of the kind described above of the status of type selections would cause the utmost havoc and confusion. It was obvious also, however, that a definite ruling on this subject was required in order to make it impossible validly to question the acceptability of such type selections. Accordingly, in Paris in 1948 the Thirteenth International Congress of Zoology, on the recommendation of the International Commission on Zoological Nomenclature, agreed to insert in the Règles words making it clear that, "for the purposes of Rule (g) in Article 30, an author is to be treated as having selected a given originally included nominal species to be the type species of a given nominal genus not only when he . . . states that he is so selecting that species but also when he does no more than state that a specified such species is the type species of the nominal genus concerned, irrespective, in the latter case, of whether he states or implies, either correctly or otherwise, that that nominal species had been selected by some previous author to be the type species of that nominal genus, or that the nominal species had become the type species of that genus through the operation of some rule (for example, the so-called "Law of Elimination") not recognised in the Règles as a mandatory provision, provided in such a case that the author concerned makes it clear that he himself accepts, for whatever reason, the species in question as the type species of the genus concerned" (see 1950, Bull. zool. Nomencl. 4: 181-182).

20. Action taken in regard to a given generic name prior to its first valid publication subsequent to 1757 irrelevant for the purposes of Article 30: Prior to 1948 it occasionally happened that, notwithstanding the provision in Article 26 and the associated Opinion 3 (1910, Smithson. Publ. 1938: 6) that for the purposes of the Règles zoological nomenclature has, as its starting point, the publication in 1758 of the Tenth Edition of the Systema Naturae of Linnaeus, an author would seek to support an argument in relation to some particular name by claiming that some action in regard to that name taken prior to 1758 had some bearing either upon the species to be regarded as the originally included species of the nominal genus so named or as regards the eligibility of such species for selection after 1757 as the type species of the genus in question. In order to dispose of fallacious arguments of this sort, the Thirteenth International Congress of Zoology, Paris, 1948, on the advice of the International Commission on Zoological Nomenclature, decided to insert in the Règles words to make it clear that "Article 30 relates only to the designation, indication, or selection of the type species of a nominal genus published subsequent to 31st December 1757, that is to say to the name of a genus originally published subsequent to the above date by a given author in a given work and that the action then taken by that author is alone relevant
to the question, (I) of what species are to be regarded as having been originally included in the genus concerned . . . or (ii) of whether the type species of the genus in question is to be treated as having been designated . . . at the time of the original publication of the generic name concerned” (see 1950, Bull. zool. Nomencl. 4: 347—348).

21. A type selection related to any place of publication other than the original place of publication of a generic name invalid under the “Règles”: Another argument occasionally advanced before 1948 in relation to particular cases (of which the name Colymbus Linnaeus, 1758, was one) was that, where a given word had been used as a generic name prior to the starting point of zoological nomenclature (as defined in Article 26) as well as at or after that starting point and some later author purported to select a type species for the genus as published before 1758, that action should be regarded as constituting also a selection of a type species for the genus as established after the starting point of zoological nomenclature, i.e., after the close of the year 1757. This argument was considered and rejected in Paris, in 1948, when the Thirteenth International Congress of Zoology, on the advice of the International Commission on Zoological Nomenclature, agreed to insert in the Règles words making it clear that “no selection of the type species of a given nominal genus, which is related to any publication of the name of that genus other than its first valid publication by its author . . . is to be accepted as a selection of the type species of that genus for the purposes of Rule (g) in Article 30” (see 1950, Bull. zool. Nomencl. 4: 348).

22. Nominal species eligible for selection as the type species of any given nominal genus: We have now examined the decisions taken by the Thirteenth International Congress of Zoology for the purpose of clarifying the provisions regarding the method to be followed in selecting the type species of a nominal genus under Rule (g) in Article 30. But the obscurities which formerly marred that Rule and made its application uncertain and open to question in many cases were not the only difficulties which up to 1948 had confronted systematists in attempting either to determine what nominal species was the type species of a given nominal genus or what nominal species were eligible for selection as such. For, although Article 30 contained (in the provision misnamed “Rule (e)”) a provision excluding certain nominal species from consideration as possible type species for any given nominal genus, it unfortunately contained no affirmative provision specifying what nominal species were to be regarded as eligible for selection as type species. In particular, there was nothing in Article 30 to show whether the field of choice for an author selecting a type species was limited to those nominal species recognised as taxonomically valid by the original author of the generic name or whether in addition a nominal species cited by the original author of a generic name in the synonymy of any one of the nominal species placed by him in the genus as representing taxonomically valid species was also eligible for
selection as the type genus. Moreover, there was no express provision in Article 30 on the question whether the selection as the type species of a genus of a nominal species not cited by the original author of a generic name should be accepted or rejected in those cases where later authors subjectively identified the nominal species so selected with one of the nominal species actually cited by the original author at the time when the generic name was first validly published. In 1948, however, these obscurities were removed when the Thirteenth International Congress of Zoology, on the advice of the International Commission on Zoological Nomenclature, decided to insert in the Règles words making it clear that "the nominal species to be regarded as having been included in a given nominal genus when the name of that genus was first published are (i) the nominal species cited by the original author as valid taxonomic species belonging to that nominal genus and (ii) any nominal species cited on that occasion as synonyms of nominal species falling in (i) above and that for such a nominal genus the foregoing nominal species were alone eligible for selection as the type species" (see 1950, Bull. zool. Nomencl. 4: 179—180).

(b) The field within which alone a valid type-selection for "Colymbus" Linnaeus, 1758, can be made under the "Règles"

23. The content of the nominal genus "Colymbus" Linnaeus, 1758, for nomenclatorial purposes: The name Colymbus Linnaeus, 1758 (Syst. Nat. (ed. 10) 1: 135) was published for a nominal genus to which at that time Linnaeus referred four nominal species, namely:—(1) Colymbus arcticus Linnaeus (: 135); (2) Colymbus cristatus Linnaeus (: 135); (3) Colymbus auritus Linnaeus (: 135); (4) Colymbus podiceps Linnaeus (: 136). Under the clarification of the meaning to be attached to the expression "originally included species" prescribed by the Thirteenth International Congress of Zoology in 1948 (see paragraph 22 above), the four nominal species bearing the foregoing specific trivial names are the only nominal species eligible to become the type species of the nominal genus Colymbus Linnaeus, 1758.

(c) The authors who, it has been claimed, either selected a type species for the nominal genus "Colymbus" Linnaeus, 1758, or took action having an equivalent effect

24. Latham, 1787: The first author who, it has been claimed, took action having the effect of determining the type species of the nominal genus Colymbus Linnaeus, 1758, was Latham (1787, Suppl. gen. Synopsis Birds [1]: 294). The argument adduced runs as follows:—(i) The genus Colymbus as established by Linnaeus in 1758 was
heterogeneous from the taxonomic standpoint, containing (a) one palmate-footed species (*pedibus palmatis*), the Black-throated Diver, *Colymbus arcticus*, and (b) three pinnate-footed species (*pedibus lobatis*), the Grebes *Colymbus cristatus*, *auritus* and *podiceps*. (2) Latham (1787) recognised the impropriety, from the systematic point of view, of including these disparate elements in a single genus and accordingly, as a first reviser, rectified the position (in the tabular statement at the end of his first supplementary volume) by erecting a new genus which he named *Podiceps* (: 294) and to which he assigned the three Grebes which Linnaeus had placed in *Colymbus* (i.e., *C. cristatus*, *auritus* and *podiceps*), together with other Grebes, and which he placed in his "Order VIII. With pinnated feet "; at the same time Latham retained (: 295) the genus *Colymbus* Linnaeus, placing in it the only remaining species (*Colymbus arcticus*) that Linnaeus had placed in his genus *Colymbus*, together with other Divers. This genus Latham placed in his "Order IX Webfooted ". (3) The removal by Latham from the genus *Colymbus Linnaeus* of the three Grebes placed in it by Linnaeus in 1758, by the transfer of those species to his new genus *Podiceps*, left, so it was argued, only one species in the genus *Colymbus Linnaeus* as constituted in 1758, namely the nominal species *Colymbus arcticus* Linnaeus, and in consequence that species, by virtue of Latham’s action, automatically became the type species of *Colymbus Linnaeus*, 1758, under the "Law of Elimination ". This argument, which was originally advanced before the introduction of the present Règles, is invalid, since those Règles do not recognise a "Law of Elimination ", as a mandatory provision for the determination of the type species of genera (paragraphs 16 and 17 above).

25. Gray (G. R.), 1840 : In 1840 (*List Genera Birds* 7 : 76) Gray (G. R.) selected *Colymbus glacialis* Linnaeus, 1766 (Syst Nat. (ed. 12) 1(1): 221) as the type species of the genus *Colymbus Linnaeus*, to which name Gray did not attribute a date. This nominal species was not one of the four such species placed by Linnaeus in the genus *Colymbus* in 1758 (see paragraph 23 above)—and, indeed, could not have been so included, for its name was not published until eight years later. Thus, this nominal species is ineligible to become the type species of the nominal genus *Colymbus Linnaeus*, 1758, and Gray’s action in so selecting it is therefore invalid.

26. Gray (G. R.), 1841 : In 1841 (*List Genera Birds* (ed. 2) : 96) Gray again treated *Colymbus glacialis* Linnaeus, 1766, as the type species of *Colymbus Linnaeus*, to which, as in the first edition he attributed no date. This type selection is invalid for the same reasons as is the same selection made by Gray in 1840 (see paragraph 25 above).

27. Gray (G. R.), 1842 : In 1842 (*Appendix List Genera Birds* : 15) Gray published a sixteen-page pamphlet in which he added supplementary notes in regard to certain of the generic names included in the
second edition of his *List*. Many of these notes consisted in the attribution of dates to generic names previously published without information on this point. In the case of the name *Colymbus* Linnaeus, the entry in the Appendix of 1842 was:—“*Colymbus*, after *L* add 1735”. From the point of view of nomenclature, this entry would have been of great importance, if in other respects the type selection for the genus *Colymbus* Linnaeus made in the Second Edition of Gray’s *List* had complied with the Règles (which as we have seen—paragraph 26 above—it did not), for the insertion of the date “ 1735 ” after the name *Colymbus* L. shows that Gray was dealing not with the Tenth Edition of the *Systema Naturae* of 1758 (the starting point of zoological nomenclature) but with the use of that name by Linnaeus in 1735 in the First Edition of the *Systema Naturae*. Under the Règles action taken in respect of a name as published prior to 1758 is totally irrelevant from the point of view of determining the type species of a nominal genus established after the starting point of zoological nomenclature (i.e., a name published in, or after, 1758) (see paragraph 20 above) and the selection of a type species of a genus, if related to any place of publication other than the first place in which that name was validly published, is invalid, having no force under Article 30 (see paragraph 21 above).

28. Gray (G. R.), 1855: In 1855 there appeared what was, in effect, a third edition of the *List of Genera of Birds*, of which, as we have seen (paragraphs 25 and 26 above) the First and Second Editions were published respectively in 1840 and 1841; it was however published under a slightly different title and it accordingly ranks for bibliographical purposes as a separate work. In this latest work Gray (1) adhered to the dating of the name *Colymbus* Linnaeus adopted in his *Appendix* of 1842, that is, he attributed it to the First Edition of the *Systema Naturae* of 1735 and not to the Tenth Edition of 1758, and (2) made a fresh type selection for the genus *Colymbus* abandoning his earlier selection of *Colymbus glacialis* Linnaeus, 1766, adopting its place *Colymbus arcticus* Linnaeus, 1758. If Gray’s action on this occasion had otherwise been in conformity with the Règles, the selection of *C. arcticus* Linnaeus would have been valid, since that nominal species is one of those referred to the genus *Colymbus* by Linnaeus in 1758. But the fact that Gray attributed the name *Colymbus* to a place of publication other than the place where that name was first validly published after the starting point of zoological nomenclature (i.e., other than the Tenth Edition of the *Systema Naturae*) renders his action in 1855 invalid for the reasons explained in paragraphs 20 and 21 above.

29. Fitzinger, 1865: In 1926 (*Ibis* (12)4 : 819) Sclater advanced the view that in 1865 (*SitzBer. Akad. wiss. Wien* (Math-Naturw. Kl.) 51: 320) Fitzinger had selected *Colymbus arcticus* Linnaeus, 1758, as the type species of the nominal genus *Colymbus* Linnaeus. As however was pointed out by Hellmayr & Conover in 1948 (*Field Mus. Publ.*
Chicago (Zool.) 13 (Pt. 1) (No. 2): 18, footnote), Fitzinger expressly stated in the preface to his paper that what he intended to do was to cite for each of the genera and subgenera concerned one of the typical species. The supplementary provision annexed to Rule (g) in Article 30 lays it down that the citation of a species as an example of a genus does not constitute the selection of that species as the type species of the genus concerned (see paragraph 14 above). Accordingly, Fitzinger's action in 1865 does not constitute a valid selection of *Colymbus arcticus* Linnaeus as the type species of *Colymbus* Linnaeus, 1758.

30. Baird, Brewer & Ridgway, 1884: In 1884 (*Water Birds N. Amer. 2*: 425) Baird, Brewer & Ridgway, when dealing with the genus *Colymbus* Linnaeus, 1758, stated that *Colymbus cristatus* Linnaeus, 1758, was the “Type, by elimination”. This species is, as we have seen (paragraph 23) one of these originally included by Linnaeus in the genus *Colymbus* in 1758, and, as in 1884 that genus was still without a validly determined type species, it was eligible for selection as such. The only argument which could at any time have been advanced against the acceptance of the action by Baird, Brewer & Ridgway as constituting a type-selection for the genus *Colymbus* Linnaeus, 1758, was that those authors did not look upon themselves as selecting *Colymbus cristatus* Linnaeus as the type species of this genus—indeed, they made it clear that they deplored the necessity of accepting it as such—but on the contrary considered that that species had already become the type species “by elimination”. As explained in paragraph 19 above, consideration was given in 1948 both by the Commission and by the International Congress of Zoology to the question whether a definite statement that a given nominal species was the type species of a particular genus constituted a selection of that species as the type species when the author making the statement made it clear that he did not regard himself as so selecting the species in question, considering rather that for one reason or another that species had already become the type species as the result of action taken by earlier authors; it was then decided that such a statement should be accepted as constituting a selection under Rule (g) in Article 30, provided that the author making the statement made it clear that he himself recognised the species in question as the type species of the genus concerned. Baird, Brewer & Ridgway made it perfectly clear that they regarded *Colymbus cristatus* Linnaeus as the type species of *Colymbus* Linnaeus, 1758, and accordingly the possible objection to the acceptance of their action is now seen to be without foundation.

31. Action by authors subsequent to Baird, Brewer & Ridgway, 1884: Once a nominal genus has validly acquired a type species under the provisions of Article 30, no action by any later author can change the type species of that genus. In the present case, we have seen (paragraph 30 above) that in 1884 the nominal genus *Colymbus* Linnaeus, 1758, which up to that time was without a type species under the *Règles*, acquired a type species through the selection as such of *Colymbus cristatus* Linnaeus, 1758, by Baird, Brewer & Ridgway.
I have therefore considered unnecessary in the present Report to recapitulate the later history of the generic name Colymbus Linnaeus, 1758. I have however examined later papers on this subject for the purpose of ascertaining whether any of them contain new evidence relevant to the present subject. I find that they do not. Those authors (e.g. Stejneger) who applied the name Colymbus Linnaeus to the Grebes have based themselves on the selection, as the type species of this genus, of Colymbus cristatus Linnaeus, 1758, by Baird, Brewer & Ridgway (1884) or upon the later similar selection by the A.O.U. in 1886 (Check-List N.Amer. Birds: 73), while those authors who have applied this name to the Divers (Loons) have either (as did Witmer Stone in 1926) accepted Gray's (1855) selection of Colymbus arcticus Linnaeus, 1758, or (as did Lonnberg in 1927) have argued in favour of the view that the same species should be accepted as the type species as the result of the action taken in 1787 by Latham, when establishing the nominal genus Podiceps.

III. PRINCIPAL CONCLUSIONS AND FINDINGS

32. Principal Conclusions: Having thus completed the survey of the problem involved in determining what species is, under the Règles, the type species of the genus Colymbus Linnaeus, 1758, which in Paris in 1948 I was invited to undertake, I now submit as follows the principal conclusions which I have reached:—

(1) The type species of the nominal genus Colymbus Linnaeus, 1758, was neither designated under Rule (a) in Article 30 nor indicated under any of the Rules lettered (b), (c), (d) or (f) in that Article (paragraphs 5-10).

(2) In view of (1) above, the type species of the foregoing nominal genus was to be determined under Rule (g) in Article 30 (type species by subsequent selection) (paragraph 11).

(3) Latham (1787), when establishing the nominal genus Podiceps and transferring thereto the three Grebes referred to the genus Colymbus by Linnaeus in 1758, thus leaving in the genus Colymbus Linnaeus, 1758, only one of the species referred thereto by Linnaeus in 1758, namely the Diver, Colymbus arcticus Linnaeus, 1758, did not thereby make that species the type species of Colymbus Linnaeus. For Article 30 of the Règles does not recognise the so-called “Law of Elimination” and under the Règles it was legitimate for any later author to select any of the originally included species to be the type species of Colymbus Linnaeus, 1758, notwithstanding the action taken by Latham in 1787 (paragraph 24).
(4) The selection by Gray in 1840 and again in 1841 of *Colymbus glacialis* Linnaeus, 1766, as the type species of *Colymbus* Linnaeus, 1758, is invalid, because that nominal species was not one of the nominal species referred to the genus *Colymbus* by Linnaeus in 1758 and, indeed, could not have been so referred, as it was not named until eight years later (paragraphs 25 and 26).

(5) The selection by Gray in 1855 of *Colymbus arcticus* Linnaeus, 1758, as the type species of the genus *Colymbus* is invalid, since that selection related not to the nominal genus *Colymbus* Linnaeus, 1758, but to the pre-1758 nominal genus *Colymbus* Linnaeus, 1735 (paragraph 28).

(6) Fitzinger (1865) cited *Colymbus arcticus* Linnaeus, 1758, as one of the typical species of the genus *Colymbus* Linnaeus, 1758, but he did not select that species to be the unique type species of that genus. Accordingly under the provision in Rule (g) in Article 30 that the expression "select the type " is to be " rigidly construed", Fitzinger did not select a type species for *Colymbus* Linnaeus, 1758 (paragraph 29).

(7) Baird, Brewer & Ridgway in 1884 stated that *Colymbus cristatus* Linnaeus, 1758, was the type species of *Colymbus* Linnaeus, 1758. That nominal species is one of those originally included in the genus *Colymbus* by Linnaeus in 1758, and was therefore eligible for selection as the type species of that genus. Under Rule (g) in Article 30, as clarified by the Thirteenth International Congress of Zoology in 1948, the validity of the action taken by the foregoing authors is not impaired by the fact that they regarded themselves not as selecting the above species to be the type species of *Colymbus* Linnaeus, 1758, but as merely recording (incorrectly) that it was already the type species " by elimination " (paragraph 30).

33. FINDING. In discharge of the duty entrusted to me in 1948, jointly by the Thirteenth International Congress of Zoology and the International Commission on Zoological Nomenclature, I have to report that, in the light of the conclusions summarised in the preceding paragraph, my Finding on the question referred to me is as follows:—

Under the “Règles” the type species of the nominal genus “*Colymbus*” Linnaeus, 1758, is the nominal species “*Colymbus cristatus*” Linnaeus, 1758, that nominal species being one of those included by Linnaeus in the nominal genus “*Colymbus*” in 1758 and being the first such species to be validly selected under Rule (g) in Article 30 to be the type species of this nominal genus, having been so selected by Baird, Brewer & Ridgway in 1884.

(signed) FRANCIS HEMMING.

9th February 1950.
4. Application submitted by the Standing Committee on Ornithological Nomenclature of the International Ornithological Congress: On 19th October 1950, the following application was submitted by Colonel Richard Meinertzhagen, Chairman of the Standing Committee on Ornithological Nomenclature established by the Tenth International Ornithological Congress at its meeting held at Uppsala in June 1950:

*Proposed use of the Plenary Powers to put an end to the confusion arising from the discordant use of the generic name “Colymbus” Linnaeus, 1758 (Class Aves)*

Application submitted by the
Standing Committee on Ornithological Nomenclature of the
International Ornithological Congress

*Covering letter, with enclosure, dated 19th October 1950, from Colonel R. Meinertzhagen, Chairman of the Standing Committee on Ornithological Nomenclature of the International Ornithological Congress*

As Chairman of the Standing Committee on Ornithological Nomenclature, I beg to forward to you the following recommendation relating to the generic name *Colymbus* Linnaeus, 1758, for favour of decision by the International Commission on Zoological Nomenclature.

For many years the name *Colymbus* Linnaeus has given rise to great confusion in ornithological nomenclature, for, owing to the lack of an authoritative ruling as to the type species of this genus, the generic name *Colymbus*, the family name *Colymbidae*, and the ordinal name *Colymbiformes* have been used by one school of ornithologists for the Divers (Loons) and by another for the Grebes.

From a preliminary discussion which took place first at one of the Plenary Sessions of the Tenth International Ornithological Congress at Uppsala in July 1950 and later at a special meeting, open to all members of the Congress, held at the suggestion of the Congress at one of its Plenary Sessions, it was apparent that there was an overwhelming desire, on the part of the ornithologists present, to secure a final settlement of the long-standing *Colymbus* controversy.

The *Colymbus* problem was therefore among the first to which consideration was given by the Standing Committee on Ornithological Nomenclature. The recommendations now submitted represent, in the unanimous opinion of the Standing Committee, the best solution that is now obtainable and the one calculated to secure the widest possible measure of support from ornithologists of all schools of thought.
ENCLOSURE

Proposals in regard to the generic name "Colymbus" Linnaeus, 1758, submitted to the International Commission on Zoological Nomenclature

The Standing Committee on Ornithological Nomenclature of the International Ornithological Congress recommend the International Commission on Zoological Nomenclature:—

(1) to use its Plenary Powers:—

(a) to suppress the generic name Colymbus Linnaeus, 1758 (Syst. Nat. (ed.10) 1: 135) for the purposes of Article 25 (Law of Priority) but not for those of Article 34 (Law of Homonymy);

(b) to set aside all type selections hitherto made for the under-mentioned genera and to designate, as their respective type species, the species specified below:—

<table>
<thead>
<tr>
<th>Name of Species</th>
<th>Species designated as type species</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gavia Forster, 1788, Enchiridion Hist. nat.: 1764, Orn. boreal.: 38</td>
<td>Colymbus immer Brünnich, 38</td>
</tr>
</tbody>
</table>

(2) to place on the Official List of Generic Names in Zoology the generic names Gavia Forster, 1788, and Podiceps Latham, 1787, with, as their respective type species, the species so designated in (1) above;

(3) to place the under-mentioned trivial names on the Official List of Specific Trivial Names in Zoology:—

(a) cristatus Linnaeus, 1758, as published in the combination Colymbus cristatus;

(b) immer Brünnich, 1764, as published in the combination Colymbus immer;

(4) to place the generic name Colymbus Linnaeus, 1758, on the Official Index of Rejected and Invalid Generic Names in Zoology.

R. MEINERTZHAHEN, Chairman of the Standing Committee.
E. STRESEMANN, Zoologisches Museum der Universität, Berlin.
5. Supplementary Report submitted by the Secretary in August 1952: Shortly before the publication of Mr. Hemming's Report of February 1950 (paragraph 3) and the application by the Standing Committee on Ornithological Nomenclature (paragraph 4) Mr. Hemming, as Secretary to the Commission submitted a Supplementary Report (on 16th August 1952) in which he drew attention to certain matters which had emerged subsequent to the submission of the two documents referred to above. These developments called for certain minor extensions of the application submitted by the Standing Committee and a revised text of the proposals of the Committee which had been prepared in agreement with Colonel Meinertzhagen, its Chairman, was annexed by Mr. Hemming to the Supplementary Report referred to above. That Report was as follows:

Supplementary Report on the problems raised by the generic name "Colymbus" Linnaeus, 1758 (Class Aves)

By FRANCIS HEMMING, C.M.G., C.B.E.

(Secretary to the International Commission on Zoological Nomenclature)

At its Session held in Paris in 1948 the International Commission on Zoological Nomenclature had under consideration the problems raised by the generic name Colymbus Linnaeus, 1758 (Syst. Nat. (ed. 10) 1: 135) (Class Aves). Differences of opinion among ornithologists as to whether Colymbus arcticus Linnaeus, 1758, a Diver (Loon) or Colymbus cristatus Linnaeus, 1758, a Grebe, was, or should be accepted as being, the type species of the genus has divided ornithologists for three full generations and has led to the most serious confusion and lack of uniformity not only at the genus-name level but also at the family-name and Ordinal-name levels. By the time of the Paris Session, the International Commission itself had had this matter under consideration for twenty-two years, an application on this subject having been submitted to it by the late Dr. (subsequently Commissioner) Witmer Stone (Academy of Natural Sciences of Philadelphia, Pennsylvania, U.S.A.) as far back as 1926. No progress of any kind had however been made towards securing a settlement of this question.

2. At Paris the Commission came to the conclusion that the views held on this subject by the two opposing groups of ornithologists were so strongly held and the practice of each so deeply entrenched that there seemed little prospect of realising the hope that it had long entertained that ornithologists generally or at least a representative group of ornithologists would come forward with agreed proposals designed to restore uniformity and stability in this branch of ornithological nomenclature. The Commission concluded, therefore, that its
proper course was to reach with as little further delay as possible a decision on the issue submitted to it by Dr. Witmer Stone in 1926. The Commission decided, as a first step, to obtain a report on the nomenclatorial issues involved from "a zoologist who was an authority on nomenclature but was not himself an ornithologist and who therefore had not had to prejudge the question in the course of his own work." Having reached this decision, the International Commission invited me to undertake this task in a personal capacity and I agreed to do so (1950, Bull. zool. Nomencl. 4: 361—362). The procedure so agreed upon was reported to, and approved by, the Section on Nomenclature of the Congress and by the Congress itself in Plenary Session.

3. In view of the importance of making progress with this case as rapidly as possible, I began the investigation entrusted to me not long after the close of the Paris meeting. When I came to examine in detail the arguments that had been advanced at different times by various ornithologists, I realised that I could not complete my Report until the Official Record of the Proceedings in Paris had been agreed upon in the prescribed manner, for it was evident that, in order to put into their proper perspective some of the arguments which had been advanced in regard to the present case, it would be necessary to quote from the Official Record passages containing decisions taken in Paris in regard to aspects of the Règles, the meaning of which had previously been open to doubt and which had a material bearing on the question referred to me for report.

4. The Official Record of the Proceedings in Paris was approved in January 1950, and I should thereupon have completed my Report and submitted it to the International Commission had it not been for the fact that I then received a letter from Commissioner Henning Lemche (Universitetets Zoologiske Museum, Copenhagen) informing me that his attention had been drawn by the Danish ornithologist, Dr. Finn Salomonsen, to certain proposals for an agreed settlement of the Colymbus problem which had been put forward by Dr. Erwin Stresemann (Berlin) at the International Ornithological Congress held at Oxford in 1934; no definite action in this matter had transpired either then or subsequently, but an International Ornithological Congress, the first since the war, was due to be held in Sweden at Uppsala later that year (1950), and it was possible that this question might be brought before that Congress. I regarded this suggestion as extremely valuable and one calculated to provide a solution of the Colymbus problem along the lines long desired by the Commission but so far never secured, namely through the presentation to the Commission by ornithologists themselves of a proposal for the solution of this problem. Later, I learnt, through Commissioner Lemche, that Dr. Salomonsen had himself decided to bring this matter before the Uppsala Congress, and he kindly furnished me with a copy of the communication which he proposed to make to that Congress on this subject.
5. Dr. Salomonsen's decision to lay this matter before the Ornithological Congress created an entirely new situation, for, if that Congress were to agree upon proposals for submission to the International Commission on Zoological Nomenclature, the narrow issue on which in 1948 I had been invited to make a report might become of academic interest only. I accordingly decided to complete that Report but to withhold its submission to the Commission until after the meeting of the International Ornithological Congress at Uppsala later that year.

6. Shortly after the close of the Uppsala Congress I was informed by Colonel Richard Meinertzhagen that Dr. Salomonsen had duly presented his paper, that there had been a considerable discussion of a preliminary nature in regard to this and other individual cases of ornithological nomenclature at a public meeting specially convened for the purpose, that no decisions had been taken in regard to the name *Colymbus*, but that it had been decided to establish a Standing Committee on Ornithological Nomenclature under his Chairmanship, that that Committee would as soon as possible take into detailed consideration the proposal in regard to the name *Colymbus* submitted to the Uppsala Congress by Dr. Salomonsen and that he hoped to be able to submit the recommendations of the Standing Committee on this case to the International Commission at an early date. On 19th October 1950 Colonel Meinertzhagen informed me by letter that the Standing Committee was unanimously agreed in asking the International Commission to use its Plenary Powers in such a way as to secure that, through the suppression of the name *Colymbus* Linnaeus, 1758, the oldest available generic names for the Grebes and the Divers should be *Podiceps* Latham, 1787, and *Gavia* Forster, 1788, respectively.

7. When the application from the Standing Committee was submitted to the customary routine examination, I found references to a generic name *Gavia* which, if an available name, would have had priority over the name *Gavia* Forster, 1788, the name recommended by the Standing Committee for stabilisation as the generic name for the Divers. The name in question was *Gavia Nozemann & Vosmaer, 1758* (in Moehring, *Geslach. Vogel.*: 5, 54), a name more commonly (though incorrectly) known as *Gavia Moehring*. Prior to the Session of the International Commission held in Paris in 1948, there was some doubt as to whether or not new names published in the Dutch edition of Moehring's *Avium Genera* prepared by Nozemann & Vosmaer and published in 1758 under the title *Geslachten der Vogelen* were available names. In Paris, however, the International Commission on Zoological Nomenclature examined this question and decided that the names in this post-1757 edition of Moehring's pre-1758 work had not been reinforced by adoption or acceptance, as prescribed originally in *Opinion* 5 and, since the Paris Congress in the *Règles* themselves (1950, *Bull. zool. Nomencl.* 4: 150), and therefore that those names possessed no rights in zoological nomenclature (1950, *ibid.* 4: 566—568). Thus, the alleged name *Gavia Nozemann & Vosmaer, 1758*, does not pre-
occupy the name *Gavia* Forster, 1788, for the Divers. In order to
dispose of this matter once and for all, it will, however, be desirable
that *Gavia* Nozemann & Vosmaer, 1758, should be placed on the
*Official Index of Rejected and Invalid Generic Names in Zoology* with
(as in similar cases) a note as to why this name is invalid.

8. The routine investigation of this case disclosed also the existence
of three generic names consisting of the word *Gavia*, each published
subsequent to *Gavia* Forster, 1788. The names in question are:
(1) *Gavia* Oken, 1816, *Lehrbuch Naturgesch.* 3 (Zool.) (2): 537; (2)
*Gavia* Boie, 1822, Oken’s *Isis* 10: 563; (3) *Gavia* Gloger, 1842, *Hand-und
Hilfsbuch Naturgesch.* 1: 433. In accordance with the Directive given
to the International Commission by the International Congress of
Zoology that decisions on individual applications are in future to
cover all aspects of the problems submitted, the foregoing names
should be added to the *Official Index of Rejected and Invalid Generic
Names in Zoology* at the same time that the name *Gavia* Forster, 1788,
is placed on the *Official List of Generic Names in Zoology*, if the
proposal to that end submitted by the Standing Committee on Ornith-
ology is approved by the International Commission. At the same
time there should also be added to the *Official Index* the two junior
homonyms of *Colymbus* Linnaeus, 1758, namely: (1) *Colymbus* Pactel,
1875 (*Fam. Gatt. Moll.*: 50); (2) *Colymbus* Hadding, 1913 (*Univ.
Arssk. Lund* (n.f.) 9(2) (No. 15): 79).

9. During his last visit to England, Dr. Ernst Mayr (*The American
Museum of Natural History, New York*) drew my attention to the
reference by Hartert (1915, *Die Vögel palaärtk. Fauna* (2): 1456) to a
generic name consisting of the word *Gavia* of older date than *Gavia
Forster, 1788, and suggested that this was a matter which should be
investigated before the application relating to the *Colymbus* problem
was considered by the International Commission. In the work
referred to by Dr. Mayr, Hartert applied the name *Colymbus* Linnaeus,
1758, to the Divers, treating *Colymbus arcticus* Linnaeus, 1758, as the
type species. As in the case of other nominal genera recognised by
him as representing taxonomically valid genera, Hartert cited under
the name *Colymbus* Linnaeus, the names of nominal genera of later
date which he regarded as junior synonyms. The first such entry
reads as follows:—“ *Gavia* Forster 1788—not S. G. Gmelin 1770!”
It is unfortunate that Hartert did not cite a bibliographical reference
for the name *Gavia* Gmelin, 1770, for this name is not noted either by
Sberhorn in his *Index Animalium* or by Neave in *Nomenclator
Zoologicus*, and it has proved a matter of some difficulty to trace the
original reference to it. This reference has however kindly been
supplied by Dr. Mayr (*in litt.*, 8th August 1952). It is as follows:
*Gavia* Gmelin (S.G.), 1770, *Reise durch Russland zur Untersuchung der
drey Natur-Reiche* 1: 152. This name was there used by Gmelin for a
gull. (In furnishing this information, Dr. Mayr drew attention to the
fact that, although the name *Gavia* is not now used for any genus of
gull, it was frequently so used in the XIXth Century and that this word or its stem appears in a number of compound words which have been published for genera of gulls, e.g., *Gavina* Bonaparte, 1854; *Bruchigavia* Bonaparte, 1855; *Gabianus* Bruch, 1853.)

10. At the same time that Dr. Mayr furnished the foregoing information, he drew attention also to the fact that the first use in the literature of the word *Gavia* as a generic name was by Brisson in 1760 (*Ornithologie* 6: 196). Brisson clearly did not apply the principles of binominal nomenclature in his *Ornithologie*—he was what in past times was called a "binary author"—but that work is of importance in ornithology and it is for this reason that in its *Opinion 37* (1911, *Smithson Publ.* 2013: 87—88) the International Commission on Zoological Nomenclature ruled in favour of the acceptance, as available, of new generic names published in the *Ornithologie* and this ruling was validated and confirmed in 1948 (see 1950, *Bull. zool. Nomencl.* 4: 65). It is evident therefore that the name *Gavia* Brisson, 1760, will need to be disposed of, if the recommendation by the Standing Committee on Ornithological Nomenclature is to be accepted. The fact that, as is now established, the word *Gavia* was used as a generic name at least twice (Brisson, 1760; Gmelin (S.G.), 1770) before it was so used by Forster in 1788 suggests the possibility that more intensive bibliographical investigations might bring to light some other use of *Gavia* as a generic name prior to Forster, 1788. In these circumstances, the only means by which an unchallengeable title could be provided for *Gavia* Forster, 1788, would be for the International Commission, when accepting that name for the Divers, to adopt a procedure similar to that employed when in similar circumstances it was desired to give an impregnable position to the generic name *Spatangus* Gray, 1825 (Class Echinoidea) (see 1950, *Bull. zool. Nomencl.* 4: 526), that is, that the International Commission should use its Plenary Powers for the purpose of suppressing for the purposes both of the Law of Priority and of the Law of Homonymy all uses of the word *Gavia* as a generic name prior to *Gavia* Forster, 1788. At the same time it would be necessary to add to the *Official Index of Rejected and Invalid Generic Names in Zoology* the two names consisting of the word *Gavia* (i.e., *Gavia* Brisson, 1760; *Gavia* Gmelin (S.G.), 1770) which are known to have been published before *Gavia* Forster, 1788.

11. Finally, it is necessary to note that under a decision taken by the Thirteenth International Congress of Zoology at Paris in 1948 it is necessary, when any name is placed on the *Official List of Generic Names in Zoology*, to note against that name the gender of the word of which that name is composed (see 1950, *Bull. zool. Nomencl.* 4: 341). Such entries will therefore be needed, if, as proposed by the Standing Committee on Ornithological Nomenclature, the names *Podiceps* Latham, 1787, and *Gavia* Forster, 1788, are now to be added to the *Official List*. The gender of the first of these names is masculine, that of the second, feminine.
12. I have consulted Colonel Meinertzhagen on the problem raised by the discovery of the generic names *Gavia* Brisson, 1760, and *Gavia* Gmelin, 1770, and on the minor matters raised in paragraphs 7 and 8 of this Report, having communicated to him for this purpose a copy of this Report in draft. In reply, Colonel Meinertzhagen has since informed me that he is in full agreement with the action suggested in paragraphs 7, 8, 10, and 11 above which, as Chairman of the Standing Committee on Ornithological Nomenclature, he considers necessary and desirable for the purpose of giving effect to the proposal submitted to the International Commission by the Standing Committee under cover of his letter of 19th October 1950. In agreement with Colonel Meinertzhagen I have therefore prepared the revised form of request annexed to the present Report as Appendix 1. This form of request Colonel Meinertzhagen asks should be treated as constituting a textual revision of the application already submitted by the Standing Committee of which he is the Chairman.\(^2\) The Report on the narrow issue of the present position of *Colymbus* Linnaeus, 1758, under the *Règles*, which, as explained in paragraph 2 of the present Report, was prepared in response to the request addressed to me in 1948, is submitted as Appendix 2.\(^3\) It is submitted only for information, having been superseded, as the basis of possible action by the International Commission, by the proposal received later from the Standing Committee on Ornithological Nomenclature appointed by the International Ornithological Congress.

(signed) FRANCIS HEMMING.

28 Park Village East,
16th August 1952.

APPENDIX 1

Application regarding the name "*Colymbus*" Linnaeus, 1758, submitted to the International Commission on Zoological Nomenclature by the Standing Committee on Ornithological Nomenclature as revised in certain minor respects in agreement with the Chairman of the Standing Committee

The International Commission on Zoological Nomenclature is asked:—

(1) to use its Plenary Powers:—

(a) to suppress the generic name *Colymbus* Linnaeus, 1758, for the purposes of the Law of Priority but not for those of the Law of Homonymy;

\(^2\) The original text of the application here referred to, which formed the enclosure to Colonel Meinertzhagen's letter of 19th October 1950, has been reproduced in paragraph 4 of the present Opinion (see page 26).

\(^3\) The Report here referred to has been reproduced in paragraph 3 of the present Opinion.
(b) to suppress for the purposes both of the Law of Priority and of the Law of Homonymy any uses of the generic name *Gavia* prior to *Gavia* Forster, 1788;

(c) to set aside all type selections hitherto made for the under-mentioned nominal genera and to designate, as their respective type species the nominal species specified below:

<table>
<thead>
<tr>
<th>Name of genus</th>
<th>Species proposed to be designated as type species of genus specified in Col. (1)</th>
</tr>
</thead>
<tbody>
<tr>
<td><em>Gavia</em> Forster, 1788,</td>
<td><em>Colymbus immer</em>, Brünich, 1764, <em>Orn. boreal.</em>: 38</td>
</tr>
<tr>
<td><em>Enchiridion Hist. nat.</em>:</td>
<td>38 (gender of generic name: feminine)</td>
</tr>
<tr>
<td><em>Suppl. gen. Synopsis Birds, [1]:</em> 294 (gender of generic name: masculine)</td>
<td></td>
</tr>
</tbody>
</table>

(2) to place on the *Official List of Generic Names in Zoology* the generic names *Gavia* Forster, 1788, and *Podiceps* Latham, 1787, with, as their respective type species, the species designated, as proposed in (1)(c) above;

(3) to place the under-mentioned trivial names on the *Official List of Specific Trivial Names in Zoology*:

(a) *cristatus* Linnaeus, 1758, as published in the combination *Colymbus cristatus* (trivial name of type species of *Podiceps* Latham, 1787);

(b) *immer* Brünich, 1764, as published in the combination *Colymbus immer* (trivial name of type species of *Gavia* Forster, 1788);

(4) to place the under-mentioned generic names on the *Official Index of Rejected and Invalid Generic Names in Zoology*:

(a) *Colymbus* Linnaeus, 1758 (Syst. Nat. (ed. 10) 1: 135), as proposed in (1)(a) above to be suppressed under the Plenary Powers;

(b) *Colymbus* Paetel, 1875, *Fam. Gatt. Moll.*: 50 (junior homonym of *Colymbus* Linnaeus, 1758);

(c) *Colymbus* Hadding, 1913 (*Univ. Arssk. Lund* (n.f.) 9(2) (No. 15): 79) (junior homonym of *Colymbus* Linnaeus, 1758);
(d) *Gavia* Brisson, 1760 (*Ornithologie* 6: 196) (as proposed, under (1)(b) above, to be suppressed under the Plenary Powers);

(e) *Gavia* Gmelin (S.G.), 1770 (*Reise Russl.* 1: 152) (as proposed, under (1)(b) above, to be suppressed under the Plenary Powers);

(f) *Gavia*, all other uses as a generic name prior to *Gavia* Forster, 1788 (as proposed under (1)(b) above to be suppressed under the Plenary Powers);

(g) *Gavia* Oken, 1816 (*Lehrbuch Naturgesch.* 3 (Zool.) (2): 537) (a junior homonym of *Gavia* Forster, 1788);

(h) *Gavia* Boie, 1822 (Oken’s *Isis* 10: 563) (a junior homonym of *Gavia* Forster, 1788);

II.—THE SUBSEQUENT HISTORY OF THE CASE

6. Registration of the present applications: Upon the receipt by Mr. Hemming in 1938 of the surviving documents relating to the consideration of the present case up to that time, the problem of the type species of the genus *Colymbus* Linnaeus, 1758, was allotted the Registered Number Z.N.(S.)78, in the new series then in process of being established.

7. Support for the present proposals received from Dr. Finn Salomonsen (Universitetets Zoologiske Museum, Copenhagen) prior to the publication of the present application: On 13th January 1950 Dr. Henning Lemche (Universitetets Zoologiske Museum, Copenhagen) communicated to the Office of the Commission a copy of a paper on the *Colymbus* question which had been prepared by Dr. Finn Salomonsen of the same Museum for communication to the Tenth International Ornithological Congress at the meeting arranged to take place at Uppsala in June of that year. In that paper Dr. Salomonsen proposed that a settlement of this long-standing controversy should be reached by asking the International Commission to suppress the generic name
Colymbus Linnaeus, thus leaving Podiceps Latham, 1787 (type species: Colymbus cristatus Linnaeus, 1758) the oldest available generic name for the Grebes and Gavia Forster, 1788 (type species: Colymbus immer Brünnich, 1764) the oldest available name for the Divers (Loons). This proposal was duly placed before the Uppsala Congress and the discussion which it provoked was largely instrumental to the establishment by that Congress of the Standing Committee on Ornithological Nomenclature under the chairmanship of Colonel Richard Meinertzhagen. As will be seen from the application submitted to the Commission in October 1950 (paragraph 4 above), the proposals put before the Uppsala Congress by Dr. Salomonsen were approved and adopted by the Standing Committee and formed the foundation of the application which it submitted to the Commission. The paper presented to the Uppsala Congress by Dr. Salomonsen, which was entitled “A Nomenclatorial Controversy: The Genus Colymbus Linnaeus 1758”, was published in 1951 in the Proceedings of that Congress (Salomonsen, Proc. Xth Int. Ornith. Congress, Uppsala, 1950: 149—154).

8. Publication of the present application: The Report prepared by Mr. Hemming in response to the request addressed to him by the Commission in Paris, the application submitted by the Standing Committee on Ornithological Nomenclature and Mr. Hemming’s Supplementary Report were sent to the printer on various dates in August 1952 and were published in the Bulletin of Zoological Nomenclature on 15th October of that year (Hemming (Paris Report), 1952, Bull. zool. Nomencl. 9: 15—29; Meinertzhagen (Standing Committee’s Application), 1952, ibid. 9: 6—7; Hemming (Supplementary Report and Revised Application by Standing Committee), 1952, ibid. 9: 8—14).

logical Nomenclature was published), (b) to the other prescribed serial publications, and (c) to the general zoological serial publications to which in addition Public Notice of such applications is customarily given. In addition, it was decided that, having regard to the fact that the group of applications published in the foregoing Part of the Bulletin of Zoological Nomenclature constituted the first move to promote stability in ornithological nomenclature taken by the Commission for many years, special measures should be adopted to bring the applications concerned prominently to the attention of ornithologists in all parts of the world. Accordingly, Public Notice in relation to the applications in question, both those which involved the possible use of the Plenary Powers and those which did not, was given to fourteen specialist serial publications or institutions concerned in ornithology. The serial publications and institutions to which Public Notice was so given under the procedure described above were the following:—

(1) Alauda, Paris
(2) Ardea, The Netherlands
(3) Auk, U.S.A.
(4) Bombay Natural History Society, India
(5) Condor, U.S.A.
(6) Gerfaut, Brussels
(7) Ibis, England
(8) Limosa, The Netherlands
(9) Naturhistoriska Museum, Stockholm (Count Nils Gyldenstolpe)
(10) L'Oiseau, Paris
(11) Ornis Fennica, Finland
(12) Ornithologie, Journal f., Germany
(13) Ostrich, Natal
(14) Vidensk. Nedd. fra Dansk. naturh. Foren, Denmark
10. General Support for the present and other applications relating to ornithological nomenclature published in Triple-Part 1/3 of volume 9 of the "Bulletin of Zoological Nomenclature":

General support for the action proposed for the promotion of stability in ornithological nomenclature in Triple-Part 1/3 of volume 9 of the Bulletin of Zoological Nomenclature was received from thirty-six (36) ornithological institutions, groups of ornithologists and individual specialists. The communications so received are reproduced in Part I of the Appendix to the present Opinion. It will therefore be sufficient here to note that the institutions and individuals from whom these communications were received were the following:—

(1) Erwin Stresemann (Zoologisches Museum, Humboldt-Universität, Berlin)
(2) G. Diesselhorst (Leiter der Ornith. Abteilung, Zoologische Sammlung des Bayerischen Staates, München, Germany)
(3) Ernst Schüz (Staatsliches Museum für Naturkunde in Stuttgart, Germany)
(4) K. H. Voous (Curator of Birds, Zoologisch Museum, Amsterdam, The Netherlands)
(5) Scottish Ornithological Club, forty-three members of
(6) Count Nils Gyldenstolpe (Naturhistoriska Museum, Stockholm)
(7) R. Kuhk (Vogelwarte Radolfzell der Max-Planck-Gesellschaft zur Förderung der Wissenschaften, Bodensee)
(8) J. Steinbacher (Forschungs-Institut und Natur-Museum Senckenberg, Frankfurt a. M.)
(9) G. Niethammer (Zoologisches Forschungsinstitut und Museum Alexander Koenig Reichinstitut, Bonn)
(10) G. C. A. Junge (Rijksmuseum van Natuurlijke Historie, Leiden)
(11) B. Rensch (Zoologisches Institut der Westfälischen Landes-Universität Münster (Westf.), Germany)
(12) Danish Zoologists Working on Scientific Ornithology
(R. Spárck; H. Volsoe; Finn Salomonsen; Knud Paludan; Holger Poulsen; M. Degerbøl; H. Johansen; F. W. Braestrup; B. Løppenthin; V. Holstein)

(13) R. Drost (Vogelwarte Helgoland, Institut für Vögelforschung, Wilhelmshaven)

(14) Helmuth O. Wagner (Direktor, Museum für Natur-, Völker- und Handelskunde, Bremen)

(15) Board of the Netherland Ornithological Society

(16) Six British Zoologists (Miss Phyllis Barclay Smith; R. S. Fitter; Eric Simms; Edward Hindle; Sir Philip Manson Barr; P. Hollom)

(17) Jean Delacour (Los Angeles County Museum, Los Angeles, Cal., U.S.A.)

(18) T. A. M. Jack (London)

(19) E. H. Bromley (Gosport, Hants, England)

(20) Ernst Mayr (then of the American Museum of Natural History, New York)

(21) V. S. Edwards (Newbury, Berks, England)

(22) W. M. Congreve (Salisbury, Wilts, England)

(23) F. J. F. Barrington (London)

(24) Ten Parasitologists interested in bird names from the point of view of the names of host species (G. H. E. Hopkins; F. G. A. M. Smit; Karl Jordan; G. O. Evans; E. Browning; S. Prudhoe; Hon. Miriam Rothschild; N. Tebble; Theresa Clay; M. A. R. Ansari (Institute of Hygiene & Tropical Medicine, Lahore)

(25) S. Allison (Nottingham, England)

(26) Austin L. Rand (Curator of Birds, Chicago Natural History Museum, Chicago, Ill., U.S.A.)

(27) S. Dillon Ripley (Assistant Curator and Assistant Professor, Yale University, Peabody Museum of Natural History, New Haven, Connecticut, U.S.A.)
(28) Ruth G. Barnes (Chippenham, Wilts, England)

(29) Vera Maynard (Hassocks, Sussex, England)

(30) Guy Mountfort (Secretary, British Ornithologists' Union)

(31) E. O. Höhn (Associate Professor of Physiology, Department of Physiology and Pharmacology, University of Alberta, Edmonton, Canada)

(32) A. W. Boyd (Northwich, Cheshire, England)

(33) John C. S. Ellis (Huddersfield, England)

(34) J. M. Winterbottom (South African Ornithological Society, Cape Town, Union of South Africa)

(35) Theed Pearse (Comox, Vancouver Is., B.C., Canada)

(36) Swedish Ornithological Association, Committee of

11. General objection received from one specialist: One specialist intimated a general objection to the use of the Plenary Powers in any of the cases relating to ornithological nomenclature dealt with in Triple-Part 1/3 of volume 9 of the Bulletin of Zoological Nomenclature. The specialist from whom this communication was received was Dr. R. Verhayen (Institut Royal des Sciences Naturelles de Belgique, Bruxelles). The letter received from this specialist is reproduced in Part 2 of the Appendix to the present Opinion.

12. Comments directly relating to the present application: Particular support for the present application was received from the following specialists and groups of specialists:—(1) Dr. A. C. V. van Bemmel (formerly Curator, Bird Department, Zoological Museum, Bogor, Indonesia); (2) M. Noël Mayaud (Faculté des Sciences de Paris, Laboratoire d’Evolution des Étres Organisés); (3) a joint communication from Dr. Josselyn Van Tyne (Ann Arbor, Michigan, U.S.A.) and six other United States ornithologists; (4) Dr. W. B. Yapp (University of Birmingham, Zoology Department, Birmingham, England). One letter of objection to the present application was received. This was a letter from Captain C. H. B. Grant (British Museum (Natural History),
London), covering a statement signed by himself and five other British ornithologists. The communications so received are reproduced in the immediately following paragraphs.

13. Support received from Dr. A. C. V. van Bemmel (formerly Curator, Bird Department, Zoological Museum, Bogor, Indonesia): On 23rd November 1952 Dr. A. C. V. van Bemmel (Honorary Assistant, Zoologisch Museum, Amsterdam, The Netherlands and formerly Curator, Bird Department, Zoological Museum, Bogor, Indonesia) addressed a letter to the Commission intimating his support for the present and certain other applications relating to ornithological nomenclature published in Triple-Part 1/3 of volume 9 of the Bulletin of Zoological Nomenclature. The following is an extract of the relevant portion of Dr. van Bemmel's letter:

Concerning the notes published in Bull. zool. Nomencl., Vol. 9, Part 1/3, pp. 1—106, I should like to inform you as follows:

I should like to ask the International Commission on Zoological Nomenclature to use its Plenary Powers as is recommended on pp. 13—14 (Colymbus). . .

14. Support received from M. Noël Mayaud (Faculté des Sciences de Paris, Laboratoire d'Evolution des Etres Organisés): On 17th March 1953 M. Noël Mayaud (Faculté des Sciences de Paris, Laboratoire des Etres Organisés) addressed a letter to the Commission enclosing a number of notes on proposals relating to ornithological nomenclature published in Triple-Part 1/3 of volume 9 of the Bulletin of Zoological Nomenclature. The note furnished by M. Mayaud in regard to the present case was as follows:

(1) L'usage de Gavia Forster, 1788, est recommandable, Colymbus Linné étant sujet à interprétations différentes.

15. Support received from Dr. Josselyn Van Tyne and six other United States ornithologists: On 18th March 1953 Dr. Josselyn Van Tyne (Ann Arbor, Michigan, U.S.A.) and the six under-mentioned specialists addressed a letter to the Commission in support of the present application:—(a) Robert W. Storer (Museum of Zoology, University of Michigan, Ann Arbor, Michigan, U.S.A.); (b) Andrew J. Berger (Ann Arbor, Michigan, U.S.A.);
OPINION 401

(c) Olin Sewall Pettingill, Jr. (Northfield, Minnesota, U.S.A.); (d) Frank A. Pitelka (Berkeley, California, U.S.A.); (e) Alden H. Miller (Berkeley, California, U.S.A.); (f) John Davis (Los Angeles, California, U.S.A.). The letter so received was as follows:—

We, the undersigned, wish to express our strong approval of proposal No. 1 (concerning Colymbus and Gavia) published on page 34 of vol. 9 of the Bulletin of Zoological Nomenclature. We hope that your Commission will take favorable action on it.

16. Support received from Dr. W. B. Yapp (University of Birmingham, Zoology Department, Birmingham, England): On 10th December 1953 Dr. W. B. Yapp (University of Birmingham, Zoology Department, Birmingham) addressed a letter to the Commission in support of the present and certain other applications published in Triple-Part 1/3 of volume 9 of the Bulletin of Zoological Nomenclature. The following is an extract of the relevant portion of Dr. Yapp’s letter:—

I should like to support very strongly the following cases referred to in Nature 172: 966:—(1) Colymbus and Gavia; . . .

17. Objection received from Captain C. H. B. Grant (British Museum (Natural History), London) and five other British ornithologists: On 2nd April 1953 Captain C. H. B. Grant (British Museum (Natural History), London) addressed a letter to the Commission, covering a statement signed by himself and five other British ornithologists objecting to the action proposed in the present case. The five other signatories were:—(a) Dr. J. M. Harrison (Sevenoaks, Kent); (b) Colonel O. E. Wynne (Fordingbridge, Hants.); (c) Mr. R. Wagstaffe (City of Liverpool Public Museums, Liverpool); (d) Lieutenant-Commander C. P. Staples, R.N. (Ickenham, Middlesex); (e) Mrs. B. P. Hall (London). The statement so communicated was as follows:—

On the genus “Colymbus” Linnaeus, 1758

It is noted that the original argument (see 1915—1916, B.O.U. List Brit. Bds.: 399 and 1948, Ibis, 1948: 330), that Brisson divided the genus has been dropped and that the “Law of Elimination” has now been invoked. The Linnean genera are valid and the description of

4 The page reference cited here is to the page in Triple-Part 1/3 of volume 9 of the Bulletin of Zoological Nomenclature, where the present application appeared as proposal No. 1 in the Prescribed Plenary Powers Notice.
the genus *Colymbus* on pp. 84 and 135 could apply to either the divers or grebes. Latham, *Syn. Bds. Suppl.* 1: 294 in 1787 placed the grebes in the genus *Podiceps*. Latham, on p. 295, gives four divers which appears to point to his having used the 1766 edition of Linnaeus, and no doubt he also knew the 1758 edition wherein only one diver is given. Even so Latham was the first author to remove the grebes from the Linnean genus *Colymbus* and leave in that genus the one species in the 1758 edition and the four species in the 1766 edition.

Latham’s action was valid in accordance with Art. 30(k) and Opinion 6. *C. arcticus* has rightly been accepted by all British systematic ornithologists as the type species of the genus *Colymbus*. The Commission’s “Law of Elimination” is inapplicable to this case and has not been recognised by systematic ornithologists in the designation of type species. Where one valid specific name has been left in a genus it automatically establishes itself as the type species. This is the practical and common-sense view to take.

The arguments put forward to the International Commission on Zoological Nomenclature are, in our opinion, unsound and insufficient to support their case to suppress the valid Linnaeus’ genus *Colymbus*. We would never agree to the suppression of any of Linnaeus’ valid genera.

After Latham’s action in 1787 *Colymbus cristatus* could no longer be regarded as in the genus *Colymbus*, and could not in 1884 be selected as the type species of that genus as it had already been established as the type species of the genus *Podiceps* Latham, and cannot be divorced from it. If it is to be allowed that any author can remove a type species from a genus it is difficult to see how any genus and its type species can have any permanent standing.

It may be mentioned that *Gavia* first appears in Brisson on p. 171 of Vol. 6, as *Gavia grisea* and Brisson’s system would be *Larus gavia grisea*. Brisson has no genus *Gavia* and Gmelin (S.G.), 1770 (Reise Russland, 1: 152), merely quotes Brisson’s *Gavia ridibunda phoenicoptes*, and in doing so has not proposed *Gavia* as a genus.

*Gavia*, as introduced by Forster, 1788 (*Ench. Hist. Nat.*: 38), is a name introduced into literature, but not into nomenclature, as no species names are given. It was introduced into nomenclature by Allen, 1908, *Bull. amer. Mus. nat. Hist.* 24: 35, who gave *Colymbus imber* Gunnerus, as the type species. It would appear that *Gavia* is
of Allen, 1908, not of Forster, 1788, in which case *Gavia* Allen, 1908, is pre-occupied by *Gavia* Swainson, 1837 (*Class. Bds. 2*: 373), type species *Gavia leucoceps* Swainson.

We are of opinion that *Gavia* is unavailable as a genus for the divers, and that *Colymbus* should be accepted with *C. arctica* as the type species. We agree with Salomonsen, 1951 (*Proc. 10th Int. Orn. Cong.: 151*), that “the use of *Colymbus* as the name of the divers ought to have been continued,” but disagree with his proposal to suppress this genus.

### III.—THE DECISION TAKEN BY THE INTERNATIONAL COMMISSION ON ZOOLOGICAL NOMENCLATURE

18. **Issue of Voting Paper V.P.(54)62**: On 14th May 1954, a Voting Paper (V.P.(54)62) was issued in which the Members of the Commission were invited to vote either for, or against, “the proposal relating to the name *Colymbus* Linnaeus, 1758, and matters connected therewith as specified in Points (1) to (4) in the Appendix printed on pages 13 and 14 of volume 9 of the *Bulletin of Zoological Nomenclature*” (i.e. in the Appendix to the Supplementary Report reproduced in paragraph 5 of the present *Opinion*).

19. **The Prescribed Voting Period**: As the foregoing Voting Paper was issued under the Three-Month Rule, the Prescribed Voting Period closed on 14th August 1954.

20. **Particulars of the Voting on Voting Paper V.P.(54)62**: At the close of the Prescribed Voting Period, the state of the voting on Voting Paper V.P.(54)62 was as follows:—

   (a) **Affirmative Votes had been given by the following nineteen (19) Commissioners (arranged in the order in which Votes were received):**

   Boschma; Holthuis; Lemche; Dymond; Hering; Vokes; Esaki; Riley; Bonnet; Bradley (J.C.);
Hemming; do Amaral; Pearson; Hankó; Sylvester-Bradley; Mertens; Cabrera; Stoll; Jaczewski;

(b) Negative Votes:

None;

(c) Voting Papers not returned:

None.

21. Declaration of Result of Vote: On 17th August 1954, Mr. Hemming, Secretary to the International Commission, acting as Returning Officer for the Vote taken on Voting Paper V.P.(54)62, signed a Certificate that the Votes cast were as set out in paragraph 20 above and declaring that the proposal submitted in the foregoing Voting Paper had been duly adopted and that the decision so taken was the decision of the International Commission in the matter aforesaid.

22. Preparation of the Ruling given in the present "Opinion": On 29th September 1955 Mr. Hemming prepared the Ruling given in the present Opinion and at the same time signed a Certificate that the terms of that Ruling were in complete accord with those of the proposal approved by the International Commission in its Vote on Voting Paper V.P.(54)62.

23. Original References: The following are the original references for the names placed on Official Lists and Official Indexes by the Ruling given in the present Opinion:—

Colymbus Linnaeus, 1758, Syst. Nat. (ed. 10) 1 : 135
Colymbus Paetel, 1875, Fam. Gatt. Moll. : 50
Colymbus Hadding, 1913, Univ. Arask. Lund (n.f.) 9 (2) No. 15): 79
Cristatus, Colymbus, Linnaeus, 1758, Syst. Nat. (ed. 10) 1 : 135
Gavia Brisson, 1760, Ornithologie 6 : 196
Gavia Gmelin (S. G.), 1770, Reise Russl. 1 : 152
24. Family-Group-Name Aspects: The present application was submitted before, under a Directive issued by the Fourteenth International Congress of Zoology, Copenhagen, 1953, it became the duty of the Commission, when placing a generic name on the Official List of Generic Names in Zoology, to investigate the question whether that generic name had been taken as the base for the name of a family-group taxon. In the present case important family-group names are involved and under the Ruling given in the present Opinion, taken in conjunction with the Ruling given in Declaration 20 (1955, Ops. Decls. int. Comm. zool. Nomenc. 10 : 1—viii), the well-known family name COLYMBIDAE becomes invalid simultaneously with the suppression under the Plenary Powers of the name of its type genus (Colymbus Linnaeus, 1758). The consequences at the family-group-name level are at present being investigated in a separate File bearing the Registered Number Z.N.(G.)127.

25. At the time of the submission of the present application the name applicable to the second portion of a binomen was "trivial name". This was altered to "specific name" by the Fourteenth International Congress of Zoology, Copenhagen, 1953, which at the same time made corresponding changes in the titles of the Official List and Official Index of names of this category. These changes in terminology have been incorporated in the Ruling given in the present Opinion.

26. The prescribed procedures were duly complied with by the International Commission on Zoological Nomenclature in dealing with the present case, and the present Opinion is accordingly hereby rendered in the name of the said International Commission by the under-signed Francis Hemming, Secretary to the...
International Commission on Zoological Nomenclature, in virtue of all and every the powers conferred upon him in that behalf.

27. The present *Opinion* shall be known as *Opinion* Four Hundred and One (401) of the International Commission on Zoological Nomenclature.

DONE in London, this Twenty-Ninth day of September, Nineteen Hundred and Fifty-Five.

*Secretary to the International Commission on Zoological Nomenclature*

FRANCIS HEMMING
APPENDIX

COMMENTS RECEIVED FROM ORNITHOLOGICAL INSTITUTIONS, GROUPS OF ORNITHOLOGISTS AND INDIVIDUAL SPECIALISTS ON THE PRESENT AND OTHER PROPOSALS ON ORNITHOLOGICAL NOMENCLATURE PUBLISHED IN TRIPLE-PART 1/3 OF VOLUME 9 OF THE "BULLETIN OF ZOOLOGICAL NOMENCLATURE"
COMMENTS RECEIVED FROM ORNITHOLOGICAL INSTITUTIONS, GROUPS OF ORNITHOLOGISTS AND INDIVIDUAL SPECIALISTS ON THE PRESENT AND OTHER PROPOSALS ON ORNITHOLOGICAL NOMENCLATURE PUBLISHED IN TRIPLE-PART 1/3 OF VOLUME 9 OF THE "BULLETIN OF ZOOLOGICAL NOMENCLATURE"

PART 1.—STATEMENTS RECEIVED FROM THIRTY-SIX ORNITHOLOGICAL INSTITUTIONS, GROUPS OF ORNITHOLOGISTS AND INDIVIDUAL SPECIALISTS SUPPORTING GENERALLY THE ACTION PROPOSED

DOCUMENT 1/1

By ERWIN STRESEMANN
(Zoologisches Museum, Humboldt-Universität zu Berlin, Germany)
(letter dated 3rd November 1952)

The twenty-two applications in your list in Parts 1/3 of volume 9 of the Bulletin of Zoological Nomenclature meet my fullest approval.
DOCUMENT 1/2

By G. DIESSELHORST

(Leiter der Ornith. Abteilung, Zoologische Sammlung des Bayerischen Staates, München, Germany)

(letter dated 20th November 1952)

I fully agree to recommendation of the 22 applications published in Triple-Part 1/3 of volume 9 of the *Bulletin of Zoological Nomenclature*. The acceptance of these applications by the International Commission on Zoological Nomenclature, would be a noteworthy step for stabilisation of Zoological Nomenclature I think. Refusal of the applications certainly would give a severe shock to confidence in taxonomy to many zoologists, especially to non-taxonomists.

By JEAN DELACOUR

(Los Angeles County Museum, Los Angeles, California, U.S.A.)
(letter dated 5th January 1953)

I hope to attend the Zoological Congress at Copenhagen next August, and to take part in the discussions about systematics and nomenclature. I would like to say now that I am in full accord with Meinertzhagen’s proposals.

DOCUMENT 1/18

By T. A. M. JACK.

(London)
(letter dated 8th January 1953)

I wish to record with you my strong approval of Col. Meinertzhagen’s attempt to attain stability in ornithological nomenclature, as set out in his note in the current number of Ibis.

DOCUMENT 1/19

By E. H. BROMLEY

(Gosport, Hants.)
(letter dated 8th January 1953)

Stability in Zoological Nomenclature: I am in agreement with the recommendations in favour of stability in zoological nomenclature proposed in Ibis, vol. 95, No. 1, Jan. 1953.
I have just returned from a three month stay at Seattle where I was visiting professor at the University of Washington. One of the first things I did after my return was to study carefully the petitions to the International Commission published in Parts 1/3 of volume 9 of the Bulletin of Zoological Nomenclature. I fully support these petitions except for the issues specified in the subsequent paragraphs.

By V. S. Edwards

(letter dated 9th January 1953)

Re Nomenclature, Ibis, vol. 95, No. 1, pp. 149—151. I strongly favour stability and agree with the recommendations.

The remainder of the above letter was concerned with the following applications:—

1. Z.N.(S.)454 (portion relating to the specific name *pacificus* Gmelin, [1789], *Turdus*); 2. Z.N.(S.)493 (specific name of the Song Thrush); 3. Z.N.(S.)575 (*Capella* Frenzel, 1801, and *Gallinago* Koch, 1816). Decisions have now been taken by the Commission in each of these cases. That on the name *Turdus pacificus* has been embodied in Opinion 409, that on the specific name for the Song Thrush in Opinion 405, and that on the *Capella/Gallinago* problem in Direction 39. The above documents are now all in the press. The two Opinions will be published in the present volume, while Direction 39 will be published in Section D of volume 1. In addition, Dr. Mayr's letter contained a concluding paragraph on the subject of Application Z.N.(S.)834 (relationship, for the purposes of the Law of Homonymy, of specific names differing from one another in spelling only by reason of differences in spelling arising from the adoption of different methods of transliterating the same word in the Latin alphabet from some other alphabet). The question of principle raised in this application was settled by the International Congress of Zoology, Copenhagen, 1953. The question of the relationship to one another of the names specified in the foregoing application has been the subject of a decision by the Commission which has now been embodied in Declaration 23. This Declaration, which will be published as Part 2 of the present volume, is now in the press.
DOCUMENT 1/22

By W. M. Congreve

(Salisbury, Wilts.)

(letter dated 10th January 1953)

This is to register my agreement in favour of ornithological nomenclature as on record in Colonel Meinertzhagen's letter in *Ibis*, vol. 95, p. 151. I know little about the subject, but consider that the constant changes have become a complete curse to serious students who correspond, etc., with foreigners overseas. Anything to get stability is worthwhile.

DOCUMENT 1/23

By F. J. F. BARRINGTON

(London)

(letter dated 11th January 1953)

I am in agreement with the recommendations published in *Ibis*, 1953, Vol. 95, p. 149 and 150.

DOCUMENT 1/24

By Ten Parasitologists interested in ornithological nomenclature from the point of view of the names of host species

(statement dated 11th January 1953)

We, the undersigned, as parasitologists, welcome any serious effort to attain stability in bird nomenclature. A great deal of our time is wasted due to changes of host names. We are not concerned with the rights or wrongs of individual names, but will support any steps which prevent confusion and change in the scientific names of birds. We are, therefore, in favour of the recommendations as outlined in the *Bulletin of Zoological Nomenclature*, vol. 9 (1952); 1—106.

DOCUMENT 1/25

By S. ALLISON
(Nottingham)
(letter dated 15th January 1953)

With T. Meinertzhagen's letter in the current issue of the *Ibis* on stability for Ornithological Nomenclature I am in complete agreement.

As Secretary of the Nottingham and District Bird Watching Society, I have to inform you that this subject has been discussed among the members, and we are unanimously in favour of the views expressed in the above letter.

DOCUMENT 1/26

By AUSTIN L. RAND
(Curator of Birds, Chicago Natural History Museum, Chicago, Illinois, U.S.A.)
(letter dated 15th January 1953)

I have recently studied Volume 9 (Parts 1/3) of the *Bulletin of Zoological Nomenclature* and wish to express my appreciation of this fine step that you are taking in stabilising nomenclature.

As a museum ornithologist I have found that the changing of names for technical reasons are the bugbears of my existence. There seems no end to it.

Thanks to the splendid start you have made, stability seems in sight.

Again let me congratulate you.
DOCUMENT 1/27

By S. DILLON RIPLEY

(Assistant Curator and Assistant Professor, Zoology, Yale University, Peabody Museum of Natural History, New Haven, Connecticut, U.S.A.)

(Extract from a letter dated 16th January 1953)

As one who was present at the meeting at Uppsala in 1950 when the International Committee on Bird Nomenclature was organized, and as one who is interested in sound systematic practice, I was very much pleased and interested to look over vol. 9, pts. 1/3, of the Bulletin of Zoological Nomenclature. I heartily concur in the measures suggested and feel that these will contribute materially to relieve dangerous tendencies to upset long-established names, the changing of which would put a grievous burden on the systematists concerned.

With hearty good wishes to you on the production of this valuable volume of the Bulletin.

DOCUMENT 1/28

By RUTH G. BARNES

(Chippenham, Wiltshire)

(letter dated 17th January 1953)

Having read in this month's number of Ibis, Colonel Meinertzhagen's addendum to the proposals for the International Commission on Zoological Nomenclature, I should like, as a member of the British Ornithologists' Union, to support his plea for stability in Ornithological Nomenclature.

---

6 The portion of the above letter which is not reproduced above is concerned with application Z.N.(S.)493 (specific name of the Song Thrush), on which a decision has now been taken by the Commission. This decision has been embodied in Opinion 405 which is now in the press and will be published in Part 4 of the present volume.
I have read in *Ibis* the proposals submitted to the International Commission for the stabilisation of nomenclature. I write to say that I am in full agreement with this, and consider it an important and essential step.

I write to inform you that I fully approve the recommendations made in the last issue of *Ibis* (page 151) for the sane reform of nomenclature.

I should like to express my agreement with the recommendations in *Ibis*, vol. 95, No. 1, 1953, aimed at stabilising ornithological nomenclature. Though ignorant of taxonomic technique, I have suffered at times from the name-changing which has resulted from the unrestricted application of taxonomic work in nomenclature.
OPINIONS AND DECLARATIONS

DOCUMENT 1/32

By A. W. BOYD

(Northwich, Cheshire)

(extract from a letter dated 11th February 1953)

Col. Meinertzhagen's Ibis letter. I cannot pretend to an interest in bird nomenclature and have been hoping in vain for a really stable list of names which can be used in perpetuity. Any plan whatever to stop these frequent changes would have me as an ardent backer.

DOCUMENT 1/33

By JOHN C. S. ELLIS

(Huddersfield)

(letter dated 18th February 1953)

As a member of the B.O.U., I wish to take the opportunity, in the interests of stability, of stating my agreement with the proposals for zoological nomenclature as set out in the current number of Ibis (vol. 95, No. 1, 1953).

DOCUMENT 1/34

By J. M. WINTERBOTTOM

(South African Ornithological Society, Cape Town, Union of South Africa)

(letter dated 9th March 1953)

This is to signify my support for the proposals recorded as Recommendations 1—22 of the Standing Committee on Ornithological Nomenclature in the current number of Ibis.
I see by the last number of *Ibis* that Col. Meinertzhagen asks members to express their views on the question of stability in nomenclature.

May I add my humble voice in favour, as an amateur. This perpetual changing of the scientific names has been most worrying. After all, with most it is the bird, not its scientific name, that is of primary interest.

The Committee of the Swedish Ornithological Association (1,900 members) has studied the proposals put forth by the Standing Committee on Ornithological Nomenclature in vol. 9 (Parts 1/3), 15th October 1952, of the *Bulletin of Zoological Nomenclature*. In order to favour stabilisation of nomenclature, the Committee supports these proposals.
PART 2.—STATEMENT RECEIVED FROM ONE SPECIALIST OBJECTING GENERALLY TO THE ACTION PROPOSED

DOCUMENT 2/1

Comment by R. VERHEYEN
(Institut Royal des Sciences Naturelles de Belgique, Bruxelles)
(letter dated 3rd December 1952)

Remarque générale: J'ai l'honneur de vous informer que je partage l'avis de ceux qui sollicitent l'application intégrale des Règles, sauf:

1° en ce qui concerne les erreurs typographiques quand celles-ci ont été reconnues comme telles par les auteurs dans leurs publications ultérieures,

2° quand la description des formes se prête à confusion et lorsque l'auteur dans ses publications ultérieures ne fournit plus aucun complément d'information.

La bibliographie n'est non seulement une branche auxiliaire de la Systématique, mais elle l'est aussi de toute autre science. Nos contemporains manifestent distinctement la tendance à sousestimer la valeur des investigations entreprises au cours des siècles écoulés. Ce que constitue un manque grave d'égards à ceux de nos prédécesseurs qui n'ont pas manqué de contribuer à l'épanouissement des sciences naturelles.

A mon avis la consécration officielle d'une erreur d'interprétation constituera un préjudice beaucoup plus grave à la discipline scientifique qu'elle accordera d'avantages à la pratique.
